Civilian Ship Scenarios

DROPFLEET COMMANDER

Civilian Ships

Civilian Ships

The Civilian Ships in these scenarios can be represented by any of the stat sheets presented in this document. While they were designed with the Princess Liner in mind, players may want to use a different Civilian Ship as an additional variant for each of these scenarios.

Civilian Transport

This Ship can only choose the General Quarters order.

This Ship cannot be attacked unless it is controlled by a player. Players cannot attack a friendly Civilian Transport.

The Controlling player cannot target this Ship with Abilities.

Boardable

This Ship can have Battalions Assigned to it as if it were a Space Station.

At the start of the round, this Ship is controlled by a Player if only they have any Battalions on it, lasting until the end of the round.

Players that control a Boardable Ship may activate it as if it were a Ship in their Fleet, after all other Groups have activated.

Blooming

Other friendly Ships within 6" of this Ship are Hidden within its Bloom. Enemy Ships attacking these Hidden Ships ignore 2 of their Group's Spikes when measuring weapons range.

This special rule ceases to function while this Ship is not controlled.

Elite Fighter Escort

At the start of each round, this Ship gains 3 Elite Fighter Tokens. Before rolling Kinetic or Energy saves against Close Action and Bomber (of any type) attacks for this ship, you may declare the use of any number of Elite Fighter Tokens.

Each token used causes this Ship to automatically succeed your choice of 2 of those Energy or Kinetic saves without rolling those dice.

Hyperyacht Somniferum	77 pts
Civilian Liner	L/30mm

Thrust	Scan	Sig	Hull	ES	KS	BS	G	Special
9"	6"	4"	6	4+	5+	6+	1	Boardable, Civilian Transport, Hero, Mercenary (All), Unique

Name	Arc	Att	Lock	DMG	Type	Special
Party Poppers	F/S	3	4+	1	E	Status

Only ship of the class: *Hyperyacht Somniferum*

The Hyperyacht Somniferum is not a sight civilized governments want to see on situation reports. Colloquially known as "the party bus", a spike in crime and illegal substances usually follows in its wake. Somniferum's current owner is the "Master of Ceremonies" Maeby Hy. The Somniferum is almost unrecognisable from its initial configuration as an Eden Aerospace Systems Luxury Liner. Lab explosions, combat damage, and ad-hoc refits have all added to it's hodge-podge appearance.

One of these many changes to the ship is the addition of a peculiar weapon system. While it has no official name, the crew and any who face it have dubbed it "Party Poppers". This weapon system fires armour piercing fragmenting flechettes that disperse airborne narcotics and electromagnetic interference into its target. Far too small and numerous to effectively track, this weapon is able to bypass the majority of a ship's point defences and deliver strikes straight to the hull.

The Somniferum is rarely seen over combat zones, preferring to stick to those planets that are safe enough for civilian travel. While able to defend itself against small time competitors, the ship isn't built for combat. More often than not, the Somniferum will make a hasty exit from a planet as soon as it detects any law enforcement on an intercept course.

L-Type Barge	– pts (Scenario Only)
Civilian Hauler	L/30mm

Thrust	Scan	Sig	Hull	ES	KS	BS	G	Special
10"	4"	3"	4	3+	6+	5+	1	Descent, Boardable, Civilian Transport

Name	Arc	Att	Lock	DMG	Type	Special
Asteroid Clearance Laser	F/S/R	2	4+	1	E	Close Action

Known ships of the class: *Scum Runner, Box 'n' Go, Haulie, LK-5 (Kalium), Oxy-Box (Vega Scrapfleet)*

The L-Type Barge was one of the most ubiquitous civilian bulk transports seen during early expansion into the cradle worlds. While relatively cheap and easy to produce, its Foldspace and sublight drives were poor at the time and were quickly superceeded by those installed on newer ships, like the Seneca Hauler. Despite its obsolete hardware the L-Type is much more durable than other ships its age. Featuring more internal bracing than neccesary, it could simply weather any attempts to stop it from delivering its cargo.

It's this durability that saw many survive the Battle of Vega, though not all unscathed. While tough, this ship's foldspace drive takes an ungainly amount of time to fully spin up, this saw many stranded over Vega while their fellow abandonists followed their enigmatic saviour. Now many of these form support ships in the Vega Scrapfleet, being retrofitted with surplus colonisation equipment, making full use of their cargo space.

Kalium still operates near pristine versions of these ships, suggesting that they still produce these in numbers. The Office of Naval Intelligence has identified no less than 6 unique L-Type Barges operating in the Kalium Navy, all operating within expected parameters of a ship their type. While new, Kalium has clearly neglected to bring these ships design specs up to even its long standing contemporaries.

LKS Dredger	61 pts
Mining Dredge	L/30mm

Thrust	Scan	Sig	Hull	ES	KS	BS	G	Special
8"	6"	6"	6	4+	5+	6+	1-2	Boardable, Mercenary (All), Vectored

Name	Arc	Att	Lock	DMG	Type	Special
Mining Maser	F	3	2+	2	E	Burnthrough-2, Close Action

Industrial Design

Improve this Group's Backup save by 2 when rolling to save hits due to Debris Fields.

Noted ships of the class: *Dredger, Silt Siphon, Ground Town*

A relentless machine of industry, built to mulch, sift, and extract until its timer runs dry. It drills deep, rips apart rock, and spits out raw profit, indifferent to the hands that keep it running. No legacy, no ownership, just a contract ticking toward expiration. When time is up, it moves on, leaving its crew behind, waiting for the next company to stake its claim on the battered frame. Inside, the workers endure the constant grind, wedged between failing systems and the unyielding demand for productivity. Comfort is non-existent, maintenance is endless.

Equipped with a heavy duty drill and front mounted mining array, this vessel doesn't just extract minerals, it carves deep trenches into asteroid surfaces and space debris, kicking up clouds of pulverized rock and metallic sediment. A network of sediment filters and gravity sifting tanks separates valuable ore from dust before storing the processed materials in its cargo bays.

Prominently displayed on the ship's exterior, the countdown display isn't a warning, it's a fact. The contract will expire, and if it doesn't get topped up, the vessel moves on to whatever comes next. Passed from one mining company to the next, these hand me down workhorses run until their rental contracts dry up. Refurbished just enough to stay functional, they degrade with every transfer, patched, battered, barely space worthy, considered scrap with engines.

Upper management doesn't care about the ship, only the ore it pulls in before time runs out. The crew works under relentless pressure, knowing there's no guarantee of renewal.

When the timer hits zero, it's out of their hands. Either the contract gets extended, or the ship moves on.

Despite its size, the colossal vessel remains a world of tight corridors for its 190 crew members. Dust and grime clings to every surface, settling in forgotten corners and coating equipment in a fine greasy layer. Minimal comforts, constant maintenance, and the daily expectation that something will break.

MK Mass Transporter	41 pts
Civilian Hauler	L / 30 mm

Thrust	Scan	Sig	Hull	ES	KS	BS	G	Special
10"	4"	4"	5	5+	6+	-	1-2	Boardable, Descent, Mercenary (All), Rare

Name	Arc	Att	Lock	DMG	Type	Special
Deterrence Missiles	F/S	4	3+	1	K	Close Action

Bulk Lighter

While a Ship with this rule is on the table, you have access to the following Ability:

Cost	Effect
1AP	**Battalion Support:** Once per activation, when you deploy Battalions from a Group on any Orbital Layer within 6" of a friendly Ship with the Bulk Lighter rule, choose one of the launching Asset types. If the chosen Asset is either Dropships or Drop Pods, place an additional Battalion. If the chosen Asset is Bulk Landers, place an additional two Battalions. Other Launch Assets are unaffected by this Ability.

It's a tough, thankless job hauling cargo from ground to space, but the Maganum Kinematics Mass Transporter takes it all in its stride. This reliable workhorse can be frequently seen flitting between orbit and atmosphere collecting and dispensing valuable cargo. During the reconquest, the durable, yet lightly armoured spaceframe of this vessel was used as a second line support vessel assisting troopships in setting up forward operating bases. Full of prefabricated barricades, fire-support bunkers, and even command centres, this small hauler vastly improves the efficiency of troops deployed to combat zones. Keeping the war machine well equipped, well stocked, and with a relatively comfortable, if cramped base to strike out at Scourge targets from.

Even though their primary contracts are with the UCM, Maganum Kinematics have sold many of these to other non government organisations. Various shipping magnates operate at least one of these reliable ships at each of their destinations. More surprisingly, even other factions have been making use of these vessels. The PHR stationed at Earth have requisitioned a pair of these ships, as well as Kalium counting no fewer than four of these vessels amongst its fleet, though only two have been seen operating in the vicinity of Earth.

M.A.B. 67 Fuel Transport	55 pts
Fuel Transporter	L / 30 mm

Thrust	Scan	Sig	Hull	ES	KS	BS	G	Special
9"	6"	4"	6	4+	4+	6+	1-2	Boardable, Civilian Transport, Mercenary (All), Vectored

Name	Arc	Att	Lock	DMG	Type	Special
Deterrence Missiles	F/S	4	3+	1	K	Alt-1, Close Action
Ignite Reserves	F/S/R	0	2+	2	E	Alt-1, Close Action, Fusillade-2

Fuel Transporter

While a Ship with this rule is on the table, you have access to the following Ability:

Cost	Effect
2AP	**Fully Fuelled:** At the start of a friendly Group's activation, if that Group is within 3" and on the same Orbital Layer as a Ship with the Fuel Transporter rule, the friendly Group increases its total movement (after Orders) by 3" this round. If that Group is on the Max Thrust order, it increases its total movement (after Orders) by 6" this round instead. If the friendly Group is C Tonnage, that Group must be within 3" and on the same Orbital Layer as two Ships with the Fuel Transporter rule instead. Ships with the Fuel Transporter rule are unaffected by this Ability.

Ignite Reserves

After completing an attack with this Weapon, this Ship is destroyed (a weapon with 0 Attack value does not roll to hit, does not cause any saves to be made, and does not inflict damage due to hits).

When this Ship is destroyed (for any reason), it explodes with a Fuel Detonation effect and a range of 3". Ships damaged by this explosion also gain a Fire token.

Famous ships of the class: *Fire in a Can, Petrol Pusher (UCM), Jugnaut, Juice Sluice, Bottle Bearer (Vega Scrapfleet), Logistics Vessel KLV-822 (Kalium)*

The Maganum Asset Bureau was once one of the largest civilian infrastructure manufacturers in the colonies prior to the inception of the UCM. Hailing from a relatively quiet colony with a focus on agriculture, the M.A.B. developed and put into service a multitude of logistical vessels. Many were designed to transport Maganum's bountiful harvests to other colony worlds, such as the M.A.B. 45 and 46, with holds designed to keep live seafood and store masses of frozen produce, keeping the colonies main source of protein moving.

Then there was the M.A.B. 67, arguably, the Bureau's most successful design. This transport is able to safely carry an exceptional volume of various types of fuel, from Maganum's simple biofuels, to the hypercompressed metallic hydrogen that keeps the UCM war machine running. Built to exacting standards, the 67 has one of the strongest and most reliable power plants for a ship of its size. As it was never expected to see actual combat, the reactors do not have the automatic shutdown safeties of UCM combat ships, indeed if the ship were to see combat, it is quite possible that any damage to the reactors could cause a major containment breach, flooding compartments with highly volatile plasma.

The ubiquity of the line meant that they were scattered far and wide at the time of the Scourge invasion, now there are 67's amongst almost all the major players of the time. The UCM have continued to produce small numbers of this ship, while M.A.B. has dwindled, they still produce original and updated designs and have mostly superseded the 67 with the much more efficient 192, a built for purpose, clearly UCM design. The Scourge have re-purposed many of these ships into water transports and rarely use them for transporting fuel, while the PHR still make use of refit variants for their logistics purposes. Many of these have been seen in resistance hands, several are part of the Vega Scrapfleet and Kalium have seemingly gotten or reverse engineered the designs to produce more ships of the class, though are much more reckless with them than any other faction.

Nirvana	– pts (Scenario Only)
Botanical Ship	L/30mm

Thrust	Scan	Sig	Hull	ES	KS	BS	G	Special
9”	4”	3”	6	4+	6+	-	1	Blooming, Boardable, Civilian Transport

Name	Arc	Att	Lock	DMG	Type	Special
Asteroid Clearance Laser	F/S/R	2	4+	1	E	Close Action

Known ships of the class: *Earth, Eden Prime, Asgard (destroyed), Elysium (Kalium)*

The Nirvana Class was designed as a mobile tourism hotspot. Each of the Cradle Worlds was represented in one ship of the class, with each rotating between systems to bring the sights of distant colonies close. Since the Scourge invasion, only four of these ships are accounted for. Earth and Eden Prime are currently in orbit around Aurum. Their serene presence is a reminder of the battle the UCM fight and are some of the most guarded civilian ships in orbit. The Asgard lies in ruins over Vega, an unfortunate victim of the first volley. A vent cannon tore through its vulnerable dome, incinerating all within. No one knows the exact number as the exact crew compliment was not recorded, but it was suspected over 1000 souls lost their lives in that instant.

Somehow, the Elysium resides above Kalium. No one is sure how exactly it found its way there, but it is suspected that it was simply circumstance. A chance jump to a random foldspace node prior to the formation of the UCM. It is unknown how many of the remaining Cradle World Nirvana's remain, as they have either fled with the abandonists at Vega, been destroyed beyond recognition, or usurped and absconded with by the Scourge for their own nefarious purposes.

The mystery of one of the remaining Nirvana's may soon be solved, as recent reconnaissance by the Lysander class UCMF Shadow's Edge has spotted what appears to be an inactive hull that matches the appearance of an unknown Nirvana class. The Shadow's edge was unable to investigate further, however, as multiple unknown signatures were detected in system.

Precedent One	– pts (Scenario Only)
VIP Transport	L/30mm

Thrust	Scan	Sig	Hull	ES	KS	BS	G	Special
9”	4”	3”	6	4+	6+	-	1	Blooming, Boardable, Civilian Transport, Elite Fighter Escort

Name	Arc	Att	Lock	DMG	Type	Special
Deterrence Missiles	F/S	4	3+	1	K	Close Action

Known ships of the class: *Precedent One, Diplomacy One*

During the Reconquest, fleetyards throughout the Colonies were hard at work constructing a multitude of civilian and logistical ships. While retrofits to the ageing Princess Liner had kept them operational for far longer than intended, their age was starting to catch up with them. The Precedent One was more of a propaganda project than anything else, a ship designed to ferry dignitaries to recaptured Cradle Worlds for diplomatic talks but only under a minimal amount of danger.

Only three ships of the class have been completed, one of which is a designated transport of UCM High Council members. Another is tasked with transporting diplomats to the Cradle Worlds friendly to the UCM, while the third is held in a secure location, should a replacement or decoy be required for either of the two in service.

PSC Interdictor	48 pts
Interdictor	L / 30mm

Thrust	Scan	Sig	Hull	ES	KS	BS	G	Special
9"	6"	4"	4	4+	4+	-	2-4	Boardable, Mercenary (All), Rapid Drop, Rare, Vectored

Name	Arc	Att	Lock	DMG	Type	Special
UF-2800i Interdiction Mass Drivers	F/S	2	3+	1	K	Arrest-4, Scald-1

Load	Launch	Special
Boarding Pods	1	-

UF-2800i Interdiction Mass Drivers

While this Group is on the Max Thrust Order, it may attack with one Weapon System. While this Group is on the Weapons Free Order, its UF-2800i Interdiction Mass Drivers have Crippling-Navigation Offline.

Infamous Ships of the Class: *Whippet, Borzoi, Shin Kicker, Stay Put*

The Colonial Fleet Penal Corps GH-Type Interdictor is a mainstay of inter-system policing and target acquisition. This fast attack craft is built to chase down fleeing criminal elements and as quickly and safely as possible, disable engines and deliver preliminary boarding parties before more specialised forces arrive to take the target into custody. Colloquially known as Gazehounds, these pack hunters are brutally efficient at intercepting fleeing ships, impacts from their custom mass drivers cause small EM pulses that stall engines and knock out reactors. While smaller than other turrets produced by the Olympus Fleet Yards, these UF-2800 variants have inbuilt capacitors, allowing the ship itself to put full power to the engines while also having weapons ready to fire. Alternatively, when all power is put into weapon systems, these capacitors add to the power coursing through the weapon, delivering a far more potent shot and clipping the wings of any criminal foolish enough to be in its sights.

SLM-9 Resupply Hauler — 35 pts

Civilian Hauler | L/30mm

Thrust	Scan	Sig	Hull	ES	KS	BS	G	Special
9"	4"	2"	5	3+	5+	6+	1	Boardable, Mercenary (All), Rare, Vectored

Resupply and Rearm

If this ship ends its movement on the same orbital layer and in base contact with a friendly ship of Medium Tonnage or higher or a Space Station, pick one of the following:

Resupply: That Ship or Space Station recovers 3 Hull points and remove any Crippling Effect tokens.

Rearm: Increase the Limited-X value of any of that Ship or Space Station's Weapons and Launch Assets by 1 until the end of the round. Each Ship or Space Station can only be affected by this rule once.

Flawed Design

This Ship cannot use its Resupply and Rearm rule if it is below half of its starting Hull.

Noted ships of the class: *Crate Expectations, Right on Time, Reliable*

A relic from the now liquidated Eden Void Logistics inc, the SLM-9 is a battle tested bulk logistics vessel, trusted for fleet replenishment in high risk environments. Though the company behind its design has since shuttered, the SLM-9 endures as a testament to their engineering prowess and affordability. Its metal cargo frame, hydraulic deployment arms and universal clamps ensure rapid, adaptable resupply of ordnance, fuel, and supplies anywhere. Rugged and inexpensive, the SLM-9 remains a reasonable choice for fleets needing a dependable workhorse at a fraction of the cost of newer models.

Unlike conventional Logistics Vessels that unload cargo gradually, the SLM-9 releases its entire payload in a single, controlled operation. Hydraulic deployment arms manoeuvre the entire cargo bed outward, allowing for structured and efficient transfer without manual unloading.

Built for adaptability, the SLM-9's pincer like grappling arms latch onto ships regardless of docking compatibility. Variable force actuators fine tune pressure, securing a stable hold without compromising hull integrity. Whether resupplying warships or assisting stranded vessels, its clamps ensure critical cargo transfer under any conditions.

The SLM-9's hydraulic deployment arms are its defining feature, but also its greatest liability. If compromised by enemy fire or mechanical failure, the vessel loses its ability to unload cargo entirely, rendering it useless. A damaged deployment system means supplies remain trapped onboard, preventing fleet resupply and turning the ship into dead weight. While reinforced plating offers some protection, direct hits can buckle the arms, leading to catastrophic failure.

Due to its critical vulnerability, the SLM-9 has begun to be phased out in favour of newer resupply haulers with reinforced unloading mechanisms and modular backup systems. The remaining SLM-9 units are considered outdated relics, still operational but increasingly rare.

T-Type Tugboat	54 pts
Tugboat	L/30mm

Thrust	Scan	Sig	Hull	ES	KS	BS	G	Special
6"	4"	3"	5	5+	5+	6+	1-4	Boardable, Civilian Transport, Descent, Mercenary (All), Monitor, Vectored

Name	Arc	Att	Lock	DMG	Type	Special
Deterrence Missiles	F/S	4	3+	1	K	Close Action
Drag to Hell	F	3	3+	2	C	Air to Air, Point Blank

Drag to Hell

After completing an attack with this weapon, remove this Ship from the table. It counts as destroyed at the end of the game.

Tugging Along

If this Ship is on General Quarters and in base contact with another Ship (friendly or enemy) you may have it Tug that Ship instead of moving normally. If you do, this Ship may turn as normal but only moves up to 3". The other Ship is then moved the same distance in the same direction, retaining its original facing. Ships can only be tugged this way up to a maximum of 6" each round.

Known ships of the class: *Tug & Go, Ride to Die, Tugging Along, T-104, T-666 (destroyed)*

The T-Type was once a common sight across many shipyards. Due to the size of many pre-war ships, a way of moving these gargantuan vessels out of drydock was needed. T-Types were devised to be the answer to this sizeable problem. The first batch of these floated out of the assembly lines prior to the first Pathfinder, ready and waiting to guide it to a safe launching point. Since then, countless multitudes of these ships have been constructed. Most serve their entire service life in the void, however some are refitted as lunar landers once their superstructure becomes unusable for its intended purpose.

Only a small amount of these were refit with foldspace drives, the majority were only designed to work around a single planet and its satellites. Those that were refit tend to be found in independent fleets, where they assist in swapping components on their larger vessels. T-Types are not built for any form of combat, though their internal bracing gives them a certain resilience, they are unable to weather any attack from dedicated combat ships.

Some T-Types have been converted to function similarly to mines, albeit with a much more personal weapon system. These have weaponised their towing ability, captains with a death wish will attach their tug to an enemy vessel and set their engines to full. When performed right, this can violently tear vessels in half, though at the cost of the tugboat and its crew.

EX-7 Packet Runner	54 pts
Packet Runner	L/30mm

Thrust	Scan	Sig	Hull	ES	KS	BS	G	Special
6"	4"	3"	6	4+	5+	6+	1	Boardable, Civilian Transport, Mercenary (All), Monitor, Rare, Reinforced Armour

Name	Arc	Att	Lock	DMG	Type	Special
Deterrence Missiles	F/S	4	3+	1	K	Close Action

Feature Carrier

This ship starts the game carrying a single deployable Hangar Feature (see 7.4.2 Deploying Features and 11.3 Features).

Space Trucker

This Ship's Hangar Deployable Feature can only be deployed to Space Stations (of any type).

Known ships of the class: *Cargoer, Pack Rat, Porch Pirate (independents), Logistics Vessel KLV-302 (Kalium)*

The EX-7 Packet-Runner is a common courier craft used throughout the territories of the United Colonies of Mankind. Designed for routine parcel and sensitive package transport, it prioritizes simple construction and dependable operation over appearance or refinement. Most examples in service are visibly beaten up and poorly maintained, their worn hulls reflecting constant use and minimal upkeep.

They are Built around a straightforward modular frame, similar to other workhorse craft like the T-Type utility haulers and the smaller VX-22 Flesners. The EX-7 typically consists of little more than the essentials: cockpit, drive assembly, and standardized cargo racks bolted into a compact hull with the cargo containers mounted underneath.

Though rarely the focus of attention, EX-7 Packet-Runners move a constant flow of everyday freight between stations, depots, and outposts, quietly handling the unglamorous but essential task of keeping day-to-day logistics running. Colonial authorities have repurposed many of these ships for the express purpose of resupplying fighter and bomber support craft. Their cargo containers filled with factory-fresh compliments of fighters and bombers waiting for an appropriate launch platform. Experimental versions of these containers have been developed to effortlessly convert standardised hardpoints on space stations into makeshift hangar bays.

Kronos Barge	57 pts
Boarding Barge	L / 30mm

Thrust	Scan	Sig	Hull	ES	KS	BS	G	Special
10"	6"	3"	6	5+	5+	-	1-2	Impetuous, Rapid Drop, Rare, Mercenary (UCM, PHR, Resistance)

Name	Arc	Att	Lock	DMG	Type	Special
NC-1 Missiles	F/S/R	1	3+	1	K	Close Action
Thermal Wake	R	5	4+	1	E	Flash-1, Scald-1

Load	Launch	Special
Boarding Pods	2	-

High Velocity Boarding Pods

This Ship's Boarding Pods may be used against targets up to 6" away.

Thermal Wake

This weapon can only be used on Ships and Space Stations up to 6" away on the same Orbital layer.

Encountered Ships of the Class: *Guttural Yell, Bellyache, Meathook, Kidney Shot*

As part of the Eightfold Syndicate's flesh trade, the Kronos Barge excels in close action boarding assaults. Contained within its hull is a legion of psychotic criminals, trained in both void warfare and frenetic combat deep in the bowels of unfortunate ships. Tasked with acquiring precious new resources for the Syndicate to peddle and press gang into servitude, there is no bargaining with them once they have their targets. The hardened fighters cram themselves into boarding pods already overloaded with fuel, jettisoned into the cold of space towards their unfortunate targets.

Any captured souls are returned to the boarding pods, jettisoned once again from the insides of the victim ship for the Kronos Barge to come and collect at a later date. Any exceptional enemy combatants are brought in alive whenever possible. When recovered these fighters are sent into the bowels of the ship and are only ever seen again once they have pledged absolute loyalty to the syndicate.

Thanks to the barge's oversized engines, it is capable of exceptional speeds, matching that of more advanced or maintained adversaries. These engines run both hot and dirty, however. A canny captain can use this to their advantage by executing "fly-by's" against enemy ships, searing hulls and imparting enough thermal energy that the enemy ship becomes much more visible to the rest of the barge's fleet.

Affluence Liner	– pts (Scenario Only)
Civilian Liner	M/40mm

Thrust	Scan	Sig	Hull	ES	KS	BS	G	Special
14"	6"	3"	12	4+	5+	-	1	Descent, Cloak-1, Boardable, Civilian Transport, Elite Fighter Escort, Unique

Name	Arc	Att	Lock	DMG	Type	Special
Deterrence Missiles	F/S	4	3+	1	K	Close Action

Only Ship of the Class: *The Affluent*

The Affluence Class Luxury liner was the one of a kind personal liner of the media mogul Jacen Board. No expense was spared when this ship was designed. Featuring the most advanced propulsion systems available on any civilian vessel, the Affluence is able to travel at staggering speeds, often only matched by ships half its size. This proved incredibly useful when the Affluent was able to outrun several Scourge ships and make an emergency foldspace jump to safety during the opening hours of the Scourge invasion.

Eventually the Affluent managed to make a calculated jump to Platina, staying in system until it was able to make the jump to Aurum. Here it would stay as a home away from home for Board. While the mogul re-started his media empire, he would never live to see what remained of the old one. It was assumed that the Affluent would spend the rest of its days docked above Aurum. That was until possibly the greatest heist seen since in the history of the UCM.

The day following the start of the reconquest was one with all focus on the largest military undertaking ever made by humanity, all except for a small few thieves, lurking in the void. Months of planning had lead them to this moment, an effort by over two dozen shipnappers across the Aurum system. To celebrate the start of the Reconquest, the Affluence was brought to a minimal operational readiness, just enough to give the UCM fleet a proper send-off. This was what the thieves were waiting for. Rushing into the conveniently open hangar bay with light dropships, they stormed the Ship's critical areas and brought the foldspace drive online. Before anyone had time to react, the Affluent was burning hard for the outer marker. Six hours later and the ship vanished from UCM space, and hasn't been seen since.

DH-Type Penal Transport	123 pts
Penal Legion Transport	M/40mm

Load	Launch	Special
Drop Pods	2	Alt-1
Boarding Pods	2	Alt-1

Penal Legions

When taken as part of your fleet, this Ship starts the game with 2 friendly Battalions on it. At the start of this Ship's activation and when any number of enemy Battalions are removed due to Boarding Actions or Battalion Combat on a Space Station within 6" of this Ship, place a single friendly Battalion on this Ship. This Ship's Boarding Pods and Drop Pods can only be used while it has friendly Battalions on it and each Boarding Pod or Drop Pod launched causes one friendly Battalion on this Ship to be removed.

Known ships of the class: *Dreadhold, No Mercy, Last Chance (UCM), Infestation (Scourge), Blood Money, Tooth and Claw (Independent), DH2745 (Kalium)*

The DH-Type represents one of the Colonial Fleet's largest run of dedicated long-range prison ships, built around a standardized architecture of reinforced armour, multi-tier detention decks and automated security. Originally intended strictly for high-risk inmate transport and remote incarceration, wartime pressures pushed the class into broader operational roles.

Though designed with consistent core systems, such as compartmentalized containment blocks, automated defensive suites, ECM shielding, and a C.A.G.E emitter field. The ships grew increasingly variable due to differing missions, retrofits, and partial deactivations. Although uncommon, Individual DH-Type vessels gained their own notoriety, such as Iron Veil, Remnant Forge, Dreadhold and Bright Spire. The DH-Type ships illustrated the evolution through conversions into troop transports, logistics carriers, medical ships, and frontier support platforms, often retaining traces of their original penal infrastructure.

In modern service, L1-class hulls endure as adaptable, if austere, multi-role assets. Their durable construction, intimidating infrastructure, and legacy security systems continue to define their operational character, reflecting both the robustness of the original design and the fleet's ongoing need to repurpose coercive architecture for broader demands.

Jah'tar Startrader	108 pts
Startrader	M/40mm

Thrust	Scan	Sig	Hull	ES	KS	BS	G	Special

Purchased Power

This Ship starts the game with 5 wares tokens.

At the start of each round, if you control this Ship, you may spend a number of wares tokens on one of the following effects until the end of the round:
Defence Harmonics - 2 Tokens: Friendly Groups within 6" improve their Energy and Kinetic saves by 1, to a maximum of a 3+.
Energy Dissipators - 1 Tokens: Friendly Groups within 9" count as having 2 fewer Spikes.
Guardian Shoal - 1 Token: Friendly Assets within 9" cannot be the target of enemy weapons.

Known ships of the class: *Bird-in-hand, Lustrous Glint, Penny for your Thoughts (UCM Designations — true names unpronounceable)*

The Jah'tar are an independent, if diminished, starfaring race that sails from the planet Jaheria. Over two century's peaceable trade with the UCM's colony of Platina, they have shared some of their history.

Their Time of Many Worlds ended roughly three millennia ago when the Great Adversary came. The Jah'tar do not know if any of their other planets survived. Their lifespans of roughly 35 years make this race-memory dimmer than one might expect, but parallels to mankind's own experience was clear—the Scourge were the likely culprits. Surviving artworks show cruder invading ships, but some Jah'tar technology bears limited similarity to Scourge, and most scientists believe it was absorbed and evolved by the enemy. Jah'tar ships also appear grown rather than made, although theirs are largely pseudo-organic chitin over a fine titanium weave.

The Jah'tar no longer fully understand their own technology. Possibly such knowledge was confined to their lost central worlds, but as in antiquity, all Jah'tar works radiate a passion for style and beauty. They covet precious materials and gems, driving their trade with Platina. In return, the UCM gains access to the Jaherian System's ores and wealth of rare elements essential for FTL drive core construction.

The Jah'tar are rangier than humans with stronger limbs and thick, leathery skin. Naturally placid and artistic, they move in an unhurried way but are fast when pressed. With long, prehensile tails they are agile climbers, leading to some exotic spaces aboard their ships. Their four, quad-jointed digits are equally dextrous on hands or feet, and are in constant motion, possibly as a base layer of communication. Their language is a series of rapid clicks and screeches, so they use human speech in negotiations out of respect for our limited vocal range.

Most of humanity's contact with the Jah'tar is via their famous Startraders—graceful, cruiser-sized ships with lavishly decorated meeting spaces, living areas, and cavernous holds. These vessels are permitted free passage within the Platina System but are closely monitored whenever they appear elsewhere in UCM space, despite being unarmed. Hawkish colonial admirals insist that all that internal space could be put to more nefarious uses. Some Startraders serve as mercenaries with other races in exchange for favourable trades, although the UCM occasionally utilises their services so too. Their value lies with their unique support technologies since the Jah'tar refuse to license any true warships to other's violence.

Relations with the alien Jah'tar is an aberration for the UCM, but these arrangements go back before the Scourge invasion and are frankly easier than conquest. Although Jaheria would inevitably be crushed, Jah'tar weaponry is formidable when they are forced to use it, and high casualties that humanity can ill-afford would result.

M-Type Barge	90 pts

Deterrence Missiles	F/S	4	3+	1	K	Close Action

Feature Carrier

This Ship starts the game carrying a Military Outpost as a Deployable Feature.

Known ships of the class: *Ever Astra, Maersk Olympus, Foldship Ace, TTF Shippy*

M-Type Barges are the larger cousin of the L-Type. Produced at the same Tharsis Manufacturing shipyards over Mars, the M-Type was designed for corporate bulk shipping. Many and more of these were owned and operated by the enduring shipping companies of old Earth, each of them emblazoned with corporate livery. Designed and built after the L-Type, these ships feature much improved Foldspace drives as well as the latest innovations in structural bracing. Optimisations in production brought the build time on these freight behemoths down to only twice that of the L-Type.

Many of these were spared the events of the Scourge invasion, most would have been slowly moving between the colonies and the cradle worlds, far enough away to make emergency jumps to safety. The initial trade and logistics network of the UCM was built upon the backs of the M-Type, their reliability and availability gave the colonies enough trade stability to recover from the loss of the cradle worlds. M-Types are surprisingly rare in Resistance fleets, most of the captains of these ships were more interested in meeting deadlines and quotas than in doomsday predictions prior to the battle of Vega. Kalium is yet to be seen operating these ships, preferring the L-Type for combat resupply, though may potentially be using M-Types in more secure Kalium controlled systems.

Recent developments in prefabricated defensive structures have allowed a small number of these ships to carry deployable missile defence outposts in place of their normal cargo compliment. These outposts are designed to grant a foothold on a planet and supplement its missile halo while more permanent structures are built, re-purposed, or captured.

Princess Liner	– pts (Scenario Only)
Civilian Liner	M/40mm

Thrust	Scan	Sig	Hull	ES	KS	BS	G	Special
10"	4"	3"	12	4+	5+	-	1	Descent, Cloak-1, Boardable, Civilian Transport

Name	Arc	Att	Lock	DMG	Type	Special
Asteroid Clearance Laser	F/S/R	2	4+	1	E	Close Action

Known ships of the class: *Gin and Jump, Queen Belle, There and Back Again, Paperlad (logistics retro-fit), Going Nowhere (prison retro-fit), Laps of Luxury (VIP transportation retro-fit)*

The Princess Class cruise liner was once a common site in the space around the Cradle World and close to the more picturesque spatial anomalies available to humanity at the time. They were the hallmark of class and distinction among many at the time, and while most were used by the pleasure seeking masses, some were personal transports for those able to afford such luxury and even as covers for covert diplomatic and espionage missions.

As with so many things, this ended quickly with the Scourge invasion. Ill-equipped to face up to even the lowliest Scourge frigate, Princess Class liners breaking orbit made for tempting and easy targets for the aliens. Most of those seconded to the evacuation effort were easy prey for the Scourge; packed to the seams with refugees, they were a cornucopia of pre-packaged hosts for the insidious race.

Those few liners that did escape only managed to do so due to their relatively low power output and small signature for a ship of their size – lacking high powered weapons, shields or point defences, they create very little return ping on most sensors.

Today there is little call for sight-seeing pleasure cruises while the fate of the galaxy hangs in the balance. The vast majority of Princess Class cruise liners still in service are have been retro-fitted for VIP transportation, as mobile prison hulks, or interplanetary logistics vehicles. There are many more still hanging in the void – deserted, dormant, or endlessly orbiting the cradle worlds; the breath taking views they offer seen by none but the dead.

OBV-64 Oblivion Barge	125 pts
Hazard Disposal	M/40mm

Thrust	Scan	Sig	Hull	ES	KS	BS	G	Special
6"	6"	8"	13	4+	5+	6+	1	Boardable, Civilian Transport, Mercenary (All), Rare, Reinforced Armour

Name	Arc	Att	Lock	DMG	Type	Special
Expel Hazards	F	2	3+	1	C	Anti Wing

Mines	3	-

Expel Hazards

This weapon can only be used against targets within Scan range and on the same Orbital Layer.

While this Ship is below its starting Hull Points, for every 2 Hull Points lost from its starting Hull Points, increase the attack of this weapon by 1.

At the start of the Repair step of the End Phase, if this Ship is not crippled, you may inflict 1 point of damage to it and up to one other Ship in base contact with it

Acquired Mines

This Ship's Mines use the stats of its parent fleet.

Known ships of the class: *Rad Wretch, Trash Bash, S-Stain (independents), Volatile Contents Hauler KHC-04a (Kalium)*

The Oblivion OBV64 Barge is a heavily armoured civilian vessel designed to transport extremely hazardous materials, unstable technology, failed reactors, and biohazards, too dangerous to store on planets. These ships travel discreetly between remote depots, derelict battlefields, and disposal zones. Crewed by an extensive team of highly trained specialists under strict quarantine and secrecy protocols, The Oblivion barge handles cargo that is often poorly understood or classified. Their role is to quietly remove dangerous discoveries and remnants from circulation before they can threaten the wider fleet, or attract unwanted attention.

Argonaut	112 pts
Living Vessel	M/40mm

Force Wave	F/S	4	3+	1	K	Arrest-2, Impel-2

Thermal Lash

When you inflict damage with this weapon, you may remove a Spike from this Group, if you do, the defending Group gains a Spike.

Mind of its Own

This Ship can be used in any fleet, regardless of faction but does not count towards point spent on M Tonnage Ships when building your fleet. This Ship cannot have an Admiral assigned to it for any reason.

Instead of picking an Order for this Group when it activates, it may in any order; turn in any direction, move up to its Thrust, attack with any number of its weapons gaining a Spike for each additional Weapon System assigned after the first. Each option can only be chosen once per activation.

At the end of this Group's activation, if it did not gain any Spikes, remove a Spike from it.

Encountered individual: *Astrofauna HD215152-A*

Though there has been extensive speculation on the viability or even potential existence of any kind of life adapted for the vacuum of space, none have been able to prove any hypothesis one way or another. The complete alien nature of something that could feasibly live without any kind of atmosphere or gravity pushes the limits of human speculation. Though themselves alien, every other race humanity has encountered has had a terrestrial origin. PHR expeditionary fleets have almost by accident stumbled into proof of space-based lifeforms. A solitary, anomalous creature was found in a small orange dwarf system. For an as-yet-unknown reason, this creature was traversing a veritable cosmic backwater with nought but ice and gas giants. Seemingly passive, the creature ignored the survey fleet, at least until it closed in. Initially curious, the creature allowed a single survey vessel close enough to scan, though was likely taking in all it could of the strange mechanical interloper.

It's temperament suddenly changed, however, when a second survey vessel moved to its opposite flank. Without warning, it unleashed a tentacle that damn near tore the closest ship in half. If it wasn't for the quick thinking of the crew the ship could well have been lost to the attack. The flanking ship was hit by an attack with no discernible origin. Crushing forces impacted the ship and though little structural damage was caused, they were pushed into a completely different heading and at a much reduced velocity.

Fortunately both ships had completed detailed scans of the creature, and although these are currently highly classified, news of this incredible discovery, now dubbed "The Argonaut", is reaching the ears of those back in the republic. Unfortunately, both survey ships have been prevented from returning to PHR space and have been instructed to seek the nearest safe-haven to repair and shelter. While the Solar system is hardly safe, it is the largest concentration of PHR assets within a reasonable distance, and is about as safe as anywhere else.

Type-87 Terminus Harvester	200 pts
Salvage Juggernaut	H/50mm

Thrust	Scan	Sig	Hull	ES	KS	BS	G	Special
7"	6"	6"	18	4+	3+	5+	1	Boardable, Porter F-2, Reinforced Armour, Mercenary (All), Monitor

Name	Arc	Att	Lock	DMG	Type	Special
Colossal Salvage Cutter	F	5	2+	3	C	Bloom-3, Point Blank

Scrap Hauler

If this Group ends its activation within 1" of a Debris Field, this Group gains a scrap token and cannot gain scrap tokens from that Debris Field for the rest of the game. A Group can have a maximum of 8 scrap tokens at any one time. Any attached Payload ships that have any scrap tokens do not count towards this limit. Whenever another Ship within 6" of a friendly Ship with this rule is destroyed, pick one of those friendly Ships, that Ship gains a scrap token.

Scratch Bodge Job

At the end of this Ship's activation, you may remove any number of scrap tokens and choose one of the following:

Scrappy Plating: One friendly Ship within 6" recovers lost Hull points equal to the amount of scrap tokens removed.

Bodge Repairs: Remove a crippling effect from a friendly Ship within 6" for each scrap token removed.

Industrial Design

Improve this Group's Backup save by 2 when rolling to save hits due to Debris Fields.

Noted ships of the class: *Terminus, Slag Pit, Scrap Hammer*

The Type-87 Terminus Harvester is a colossal reclamation vessel built to consume the unrepairable wreckage of war. Its monolithic maw engulfs chunks up to frigate tonnage, feeding them into vast crushing chambers where superheated hydraulic presses obliterate hull plating to slag. Two VX-22 Flensers detach from its hull, peeling derelicts apart and hauling scraps to their final destruction. Ancient, slow-moving, and relentless, it labours, stripping vessels down to raw material. Within its corroded halls, life is harsh. Dim corridors reek of burning metal as air filters struggle against decades of industrial smog.

The Type-87's wedge-like prow is battered and scarred, worn from decades of grinding through wreckage. Deep gouges and warped plating mark where debris crumpled beneath its relentless push, clearing the way for the behemoth behind.

A monolithic opening capable of engulfing entire frigates, feeding them into a crushing chamber spanning the volume of a megastructure. Inside, reinforced walls lined with titanic hydraulic presses grind vessels down in a superheated maelstrom of pulverized metal, reducing all to molten slag.

Equipped with two VX-22 Flensers, these small salvage vessels dock onto the Harvester's hull when idle but detach to roam wreckage fields. They Brutally peel derelicts apart piecemeal while hauling fragmented components to the crushing maw. Though technically separate, they operate as an extension of the Harvester, ensuring no usable scrap escapes consumption.

VX-22 Flenser	45 pts
Salvage Corvette	L/30mm

Thrust	Scan	Sig	Hull	ES	KS	BS	G	Special
6"	4"	3"	4	5+	4+	6+	-	Mercenary (All), Payload F-1, Vectored

Name	Arc	Att	Lock	DMG	Type	Special
Sawblade Prow	F	2	2+	2	C	Point Blank, Bloom-1

Scrap Collection

If this Ship ends its activation within 1" of a Debris Field, this Ship gains a scrap token and cannot gain scrap tokens from that Debris Field for the rest of the game. A Ship with this rule can have a maximum of 3 scrap tokens at any one time. Whenever another Ship within 6" of a friendly Ship with this rule is destroyed, pick one of those friendly Ships, that Ship gains a scrap token.

Unload

When you attach this Ship to a Porter Ship, you may have the Porter Ship gain all of this Ship's scrap tokens.

Industrial Design

Improve this Group's Backup save by 2 when rolling to save hits due to Debris Fields.

Noted ships of the class: *Wreck & Ruin, Twisted Metal, Steel Beams, Grindcore*

The VX-22 Flensers are compact salvage vessels designed for brutal ship dismantling. Their prow mounted sawblades don't cut cleanly, they tear, shred, and rip through wreckage with unrestrained violence. Designed for aggressive reclamation, they are the smaller, more aggressive sibling to the T-Type Tugboat. Where the Tugboat manoeuvres and stabilizes wreckage for controlled processing, the Flensers gut derelicts with reckless brutality, prioritizing destruction over precision.

Heavy rotating saws brutally cut through hull plating, breaking it into manageable pieces and scattering debris as they progress.

Instead of delicate incision, the Flensers' sawblades operate at maximum torque, chewing through reinforced bulkheads with enough force to buckle surrounding structure.

Their cutting mechanisms frequently overheat, causing violent energy surges that make their hulls shudder mid operation.

The Flenser hurls debris into the Type-87 Terminus Harvester's compactor bay, sometimes suffering brutal kickback as the churning machinery spits chunks back out. When it happens, the debris slams into its failing frame, worsening the damage and making every load a gamble.

Positioned below the cockpit, this reinforced plating shields pilots from wreckage kicked up during cutting operations. Sloped for maximum deflection, it redirects debris that could slam into the hull with deadly force, absorbing impacts before they buckle metal or breach compartments.

PRK-91 Provenance Ark	400 pts
Terraformer	C/60mm

Fighters & Bombers	4	-
Bulk Landers	2	-

Genesis Spikes

When this weapon successfully inflicts any amount of damage against a City, place a Mutant Fauna token on that Dropsite. Mutant Fauna tokens are not Battalions and cannot control or contest a Dropsite. When any player deploys any number of Battalions to that Dropsite, if that Dropsite has any Mutant Fauna tokens, those Battalions are only placed on a roll of a 5+. **If any Battalions are not placed this way**, remove a Mutant Fauna token from that Dropsite. If a Dropsite starts a round with a Mutant Fauna token, remove that token at the end of the round.

Expansive Radiator Systems

At the start of this Ship's activation, remove two Spikes from it.

Acquired Fighters & Bombers

This ship's Fighters & Bombers use the stats of its parent fleet (if you included this ship in a Scourge fleet, its Fighters & Bombers would follow the Scourge Fighters & Bombers rules).

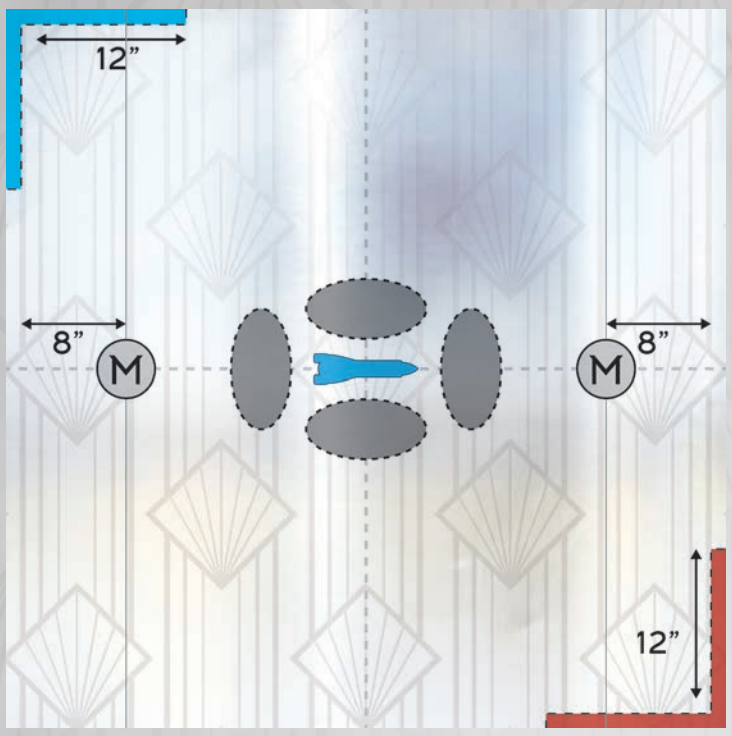

Known ships of the class: *Provenance, Endurance (independent), Capitana (Kalium)*

A monolithic vessel of unimaginable scale, the Provenance Ark dwarfs most ships. A precursor to the modular construction found on Coloniser class vessels, these ships were a talisman of hope and expansionism. These are the first major terraforming vessels built by mankind, reaching out into an unknown universe. Built to prepare entire worlds for habitation, it carries vast stores of genetic material, atmospheric stabilizers, and autonomous resource systems. The Ark monitors planetary progress through an extensive network of sensors and automated regulators, adjusting atmospheric composition, maintaining microbial balance, and even modulating gravitational and magnetic fields to stabilize emerging terrains.

Entire cities once mere schematics, rise, with power grids, transport arteries, and habitation modules ready long before the first settlers arrive. Inside, Construction drones and biotic cultivators orchestrate the birth of forests, oceans, and breathable atmospheres with the precision of a master artisan.

Many ships of this class feature underslung terraforming torpedo launchers. While near useless in ship to ship combat, these torpedoes are geared towards atmospheric re-entry and contain a plethora of mutagens and nerve agents, some of which would be used on Senator class battlecruisers. Under normal circumstances the use of these would constitute a war crime. Here they are simply used to rid prospective landing areas of their megafauna, causing mass hysteria and aggression in local fauna. Any issues with unruly creatures take care of themselves, and those left over can be cut down by specialised anti-fauna vehicles. Once the LZ is cleared of hostiles, the terraformer can then deploy more traditional terraforming methods.

Retrieving Intelligence

Players: 2

Scenery: 2-4 Micrometeor Clouds, placed as shown on the map. 4 Debris Fields, placed as normal.

Deployment: Column

Scoring: Standard Scoring.

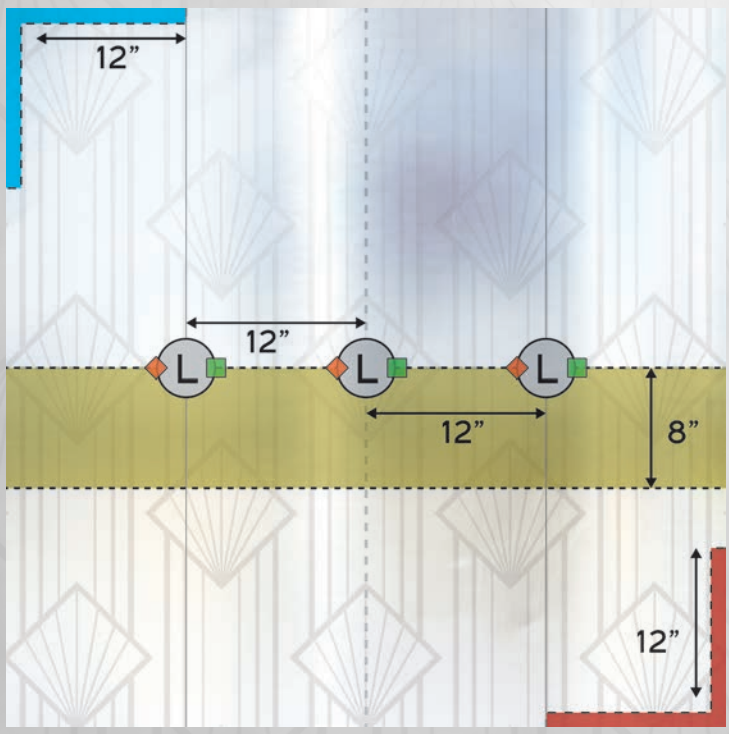

A Player that Controls the Civilian Ship at the end of the game gains 4VP. That player gains an additional 2VP if the Civilian Ship is within 12” of their Deployment Zone.

A Player that Contests the Civilian Ship at the end of the game gains 2VP.

If a player destroys the Civilian Ship while it is within 12” of an opponents Deployment Zone, that player gains 2VP.

If the Civilian Ship is destroyed at any other time, each player loses 2VP.

Make the Rendezvous

Players: 1 attacker in red, 1 defender in blue. The attacker’s fleet should include 500 more points than the defender.

Scenery: 2-4 Micrometeor Cloud, 4-6 Debris Fields.

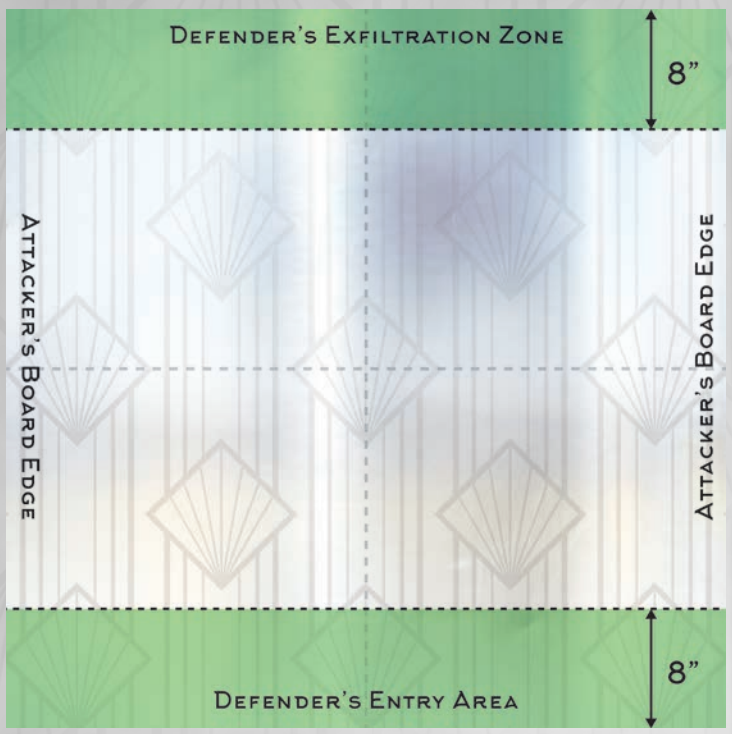

Deployment: All players Distant. The Defender may directly deploy any number of their H and C tonnage Groups in the yellow deployment zone. These Groups may activate from the 1st round as normal.

Scoring: The Defender gains 2VP each time they place a Crew Token on a Space Station. The defender gains 1VP at the end of the game for each Space Station they Control. The Defender gains 2VP at the end of the game if their Civilian Ship is not destroyed.

The Attacker gains 2VP for each Space Station destroyed at the end of the game and 3VP for each Space Station they control at the end of the game. The attacker gains 2VP If they destroy the Civilian Ship

Special Rules: The defender gains 1 Civilian Ship of their choice to add to their fleet. This Civilian Ship may substitute all attacking and launch when it activates to place 1 Crew Token on a Space Station within 3”. Each Space Station can only have a single Crew Token.

Mass Exodus

Players: 1 attacker, 1 defender. For each Group of non-civilian ships in the defender's list, the defender must take 1 Civilian **Ship** (either alone or adding to an existing Group of that Civilian Ship). These Civilian Ships start the game with 4 friendly Battalions on them.

Scenery: 2-4 Micrometeor Cloud, 4-6 Debris Fields.

Deployment:

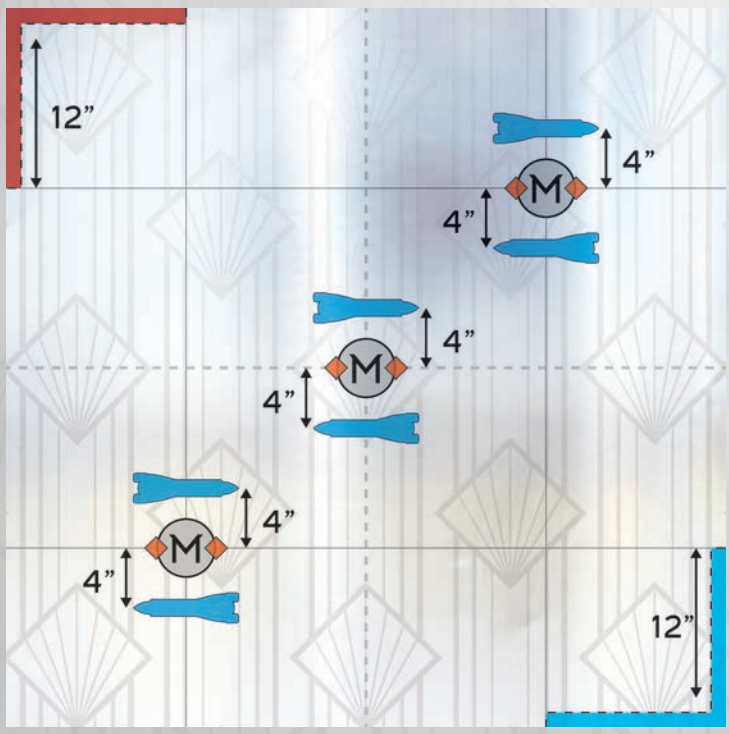

Attacker-Distant, deploying from either board edge.

Defender-Directly Deploy in the Entry Area.

Scoring: The attacker gains 2VP for each Civilian Ship they destroy. The attacker gains 3VP for each Civilian Ship they Control at the end of the game and 1VP for each Civilian Ship they Contest at the end of the game.

The defender gains 3VP for each Civilian Ship that they Control or Contest in their Exfiltration Zone at the end of the game. The defender gains 2VP for each Controlled Civilian Ship and 1VP for each Contested Ship outside the Exfiltration Zone at the end of the game.

Shipyard Raid

Players: 2

Scenery: 2-4 Micrometeor Cloud, 4-6 Debris Fields.

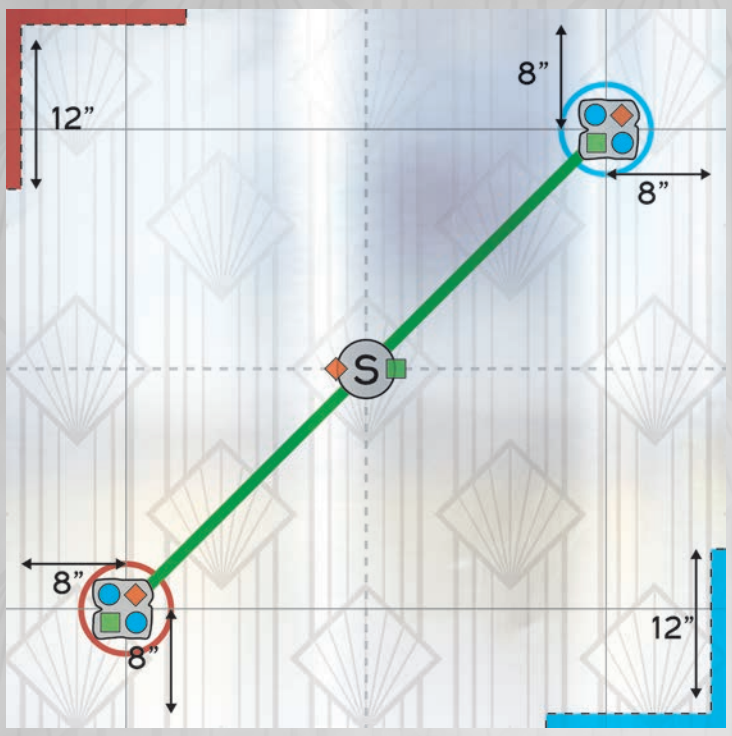

Deployment: Close Enough.

Scoring: Standard Scoring

Each Controlled Civilian Ship that ends a round within 4" of the controlling players' deployment zone is removed from the game and the controlling player gains 2VP.

Players that destroy a Civilian Ship gain 1VP.

Tug of War

Players: 2

Scenery: 4 Micrometeor Clouds, 2 Debris Fields. Place these at least 3” away from the green line.

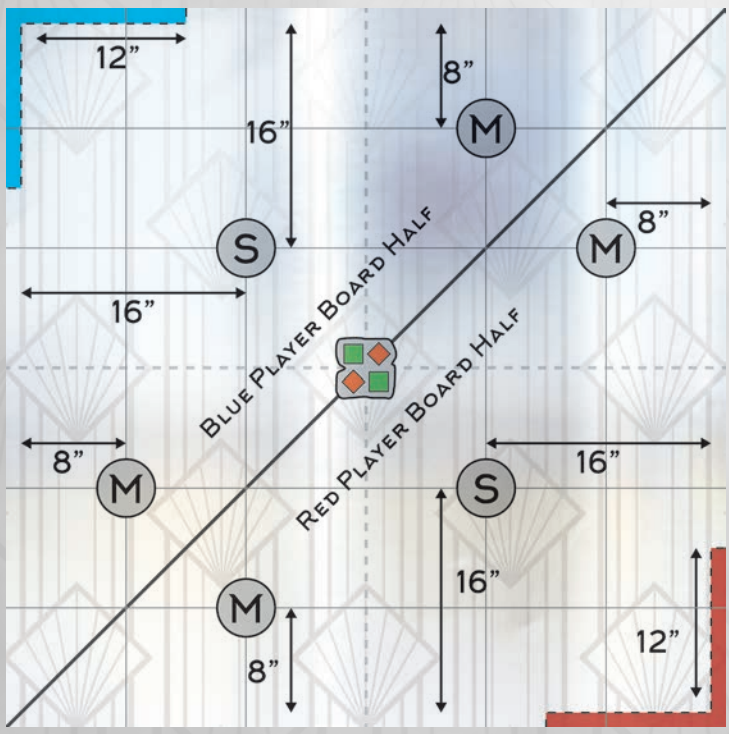

Deployment: Close Enough

Scoring: Standard Scoring.

At the end of the game, measure the distance from the Space Station to each City. Players gain 1VP for each inch the Space Station is away from their opponent’s City.

Special Rules: Each player starts the game with 2 T-Type Tugboats, split into 2 Groups. Each Tugboat starts the game with 3 friendly Battalions on it. These Groups are able to use their Tugging Along special rule on the Small Space Station. When the Space Station is moved this way, it moves directly along the green line towards the controlling player’s marked City instead of the direction of the Tugboat.

Mandatory Festivities

Players: 2.

Scenery: 2 Micrometeor Clouds, 4 Debris Fields.

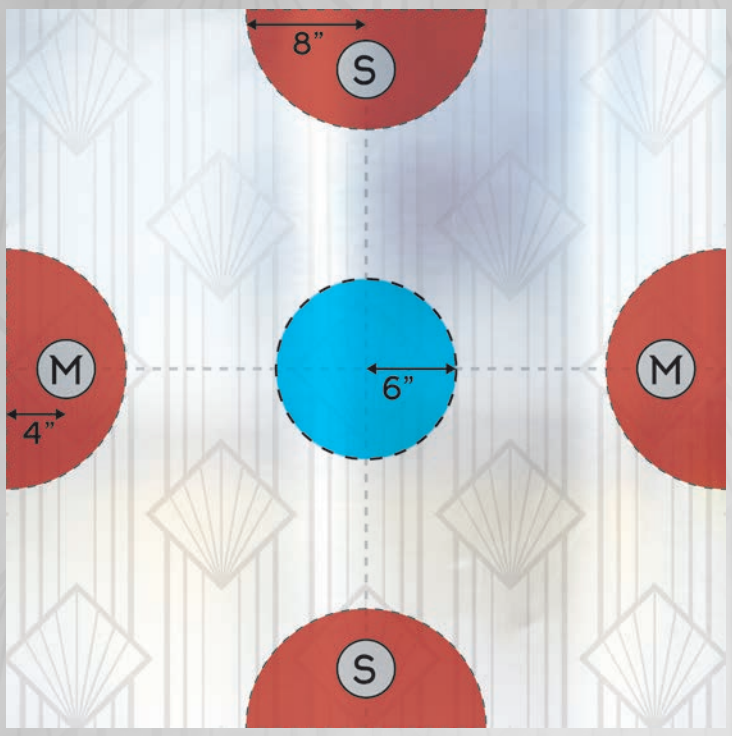

Deployment: Close Enough.

Scoring: Raise.

At the end of the game, players gain 2VP for each of the listed Space Stations in their opponent’s board half with a Party Feature.

Special Rules: Each player starts the game with a Hyperyacht Somniferum, as if it were part of their Fleet. When attacking a Space Station, if the attack successfully inflicts damage, place a Party Feature on that Space Station. Party Features confer no special rules and do not modify saves, but can be removed as normal for Features.

Supply Run

Players: 1 Attacking player in red, 1 Defending player in blue.

Scenery: 4 Debris Field, 4 Micrometeor Clouds 2 small space stations and 2 medium space stations.

Deployment: Red Directly Deploys, Blue Deploys Close.

Scoring: Standard Scoring.

The Defender scores 3VP for each medium space station that has been affected by the Rearm and Resupply rule and 2VP for every Small space station that has been affected by the rule.

The attacker scores 3VP if the Supply Hauler has been removed from the game.

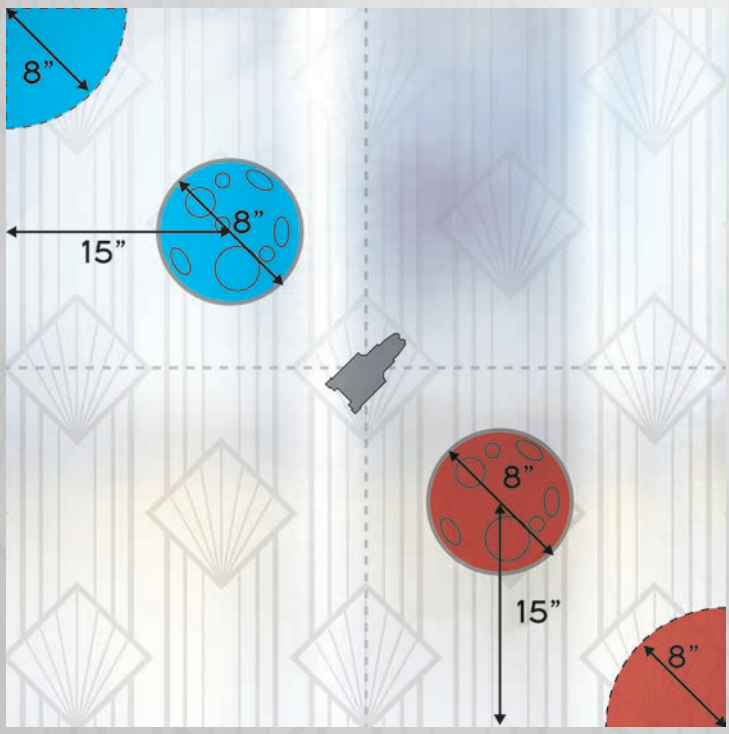

Special Rules: The Defender deploys a single SLM-9 Resupply Hauler during either the 1st or 2nd round with 6 friendly Battalions on it.

Each Space Station has the following Launch Assets:

Load	Launch	Special
Light Torpedo	1	Limited-2

Load	Thrust	Att	Lock	DMG	Type	Special
Light Torpedo	6”	4	3+	1	K	Penetrator

On the Clock

Players: 2.

Scenery: 2 8” Large Objects (as shown — one for each player), 4 Debris Fields, 4 Micrometeor Clouds.

Deployment: Standoff

Scoring: Players are awarded 1VP at the end of the game for every 500 points of Ships and Admirals they have destroyed.

Players score 1VP at the end of the game for each point of damage their opponent’s Large Object has suffered this game. A player automatically wins the game if they destroy their opponent’s Large Object and 1000 points of Ships and Admirals.

Special Rules: Each Large Object starts the game with 18 Hull. Large Objects can only be damaged by the LKS Dredger.

At the start of each round players must determine who controls the Dredger. A player controls the dredger if there is a friendly group within 6”, if there is friendly and enemy groups within 6” the player with the closest group takes control of the Dredger. If both groups are the same distance from the Dredger then players roll off, the player who rolls highest controls the Dredger that round. The player that controls the Dredger may activate it as if it was a ship that was part of their fleet.

If the Dredger is not controlled by either player it may not be targeted by attacks nor does it activate this round.

Scrap Collection

Players: 1 Attacker in Red, 1 Defender in Blue.

Scenery: 6 Debris Fields placed as shown in the map.

Deployment: Defender Directly Deploys. Attacker Deploys Close.

Scoring: The defender scores a number of victory points equal to number of Scrap tokens on any friendly Harvester or Flenser ship they control and that is still alive at the end of the game.

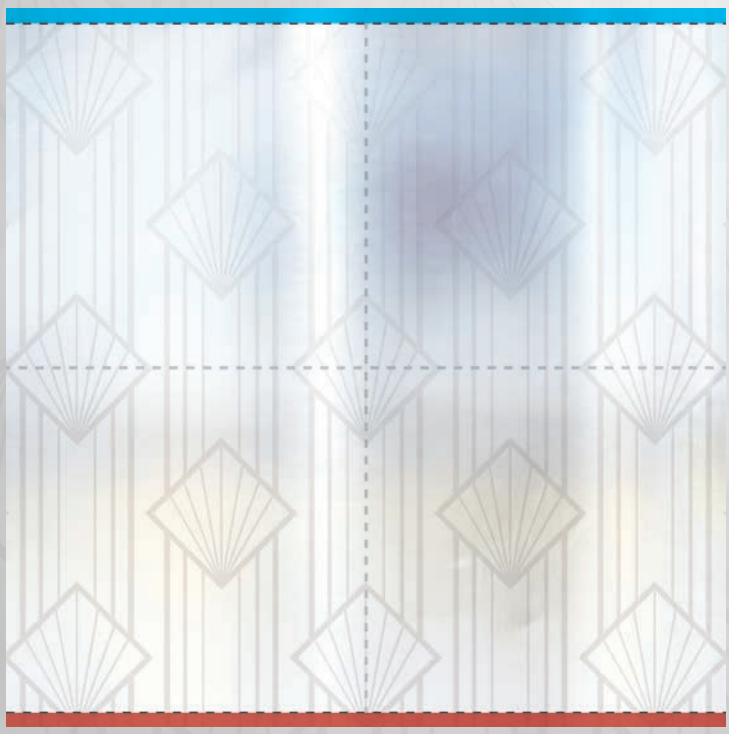

The attacker scores 3 Victory Points for every VX-22 Flenser destroyed and 6 Victory Points if they destroy the Type - 87 Terminus Harvester.

Special Rules: The Defender begins the game with a Terminus Harvester with 6 friendly battalions on it and 2 attached Flensers.

The Harvester activates like any other friendly Group and is treated as such for all rules purposes.

Whenever a Group of ships is destroyed, place a Debris field within 3” of the final destroyed Ships location. Whenever a group of ships is destroyed in this mission, place one Debris field in the position the ships were in before they were removed from the board.

Grind to Dust

Players: 2.

Scenery: 7 Debris Fields, 7 Micrometeor Clouds spread out as evenly as possible.

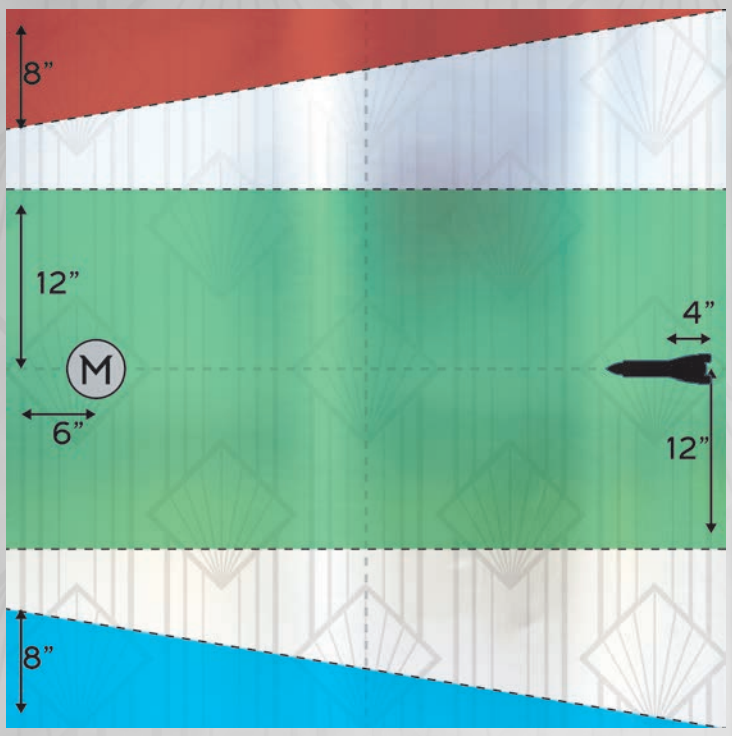

Deployment: Both Players Close.

Scoring: Whenever one or more of a player’s Groups gain a scrap token from a Debris Field, remove that Debris Field from the game and that player gains 1VP.

Special Rules: Each player starts the game with a Terminus Harvester with 2 attached Flenser’s.

Each player’s fleet should be a maximum of 500 points, though each player may treat the game size as Clash for their Admiral and Ship/Group limits.

Down With The Cities

Players: 2.

Scenery: 6 Debris Fields 2-4 Micrometeor Clouds.

Deployment: Staggered (Scenario Expansion 1).

The Provenance Ark is deployed as per the diagram at the start of the game.

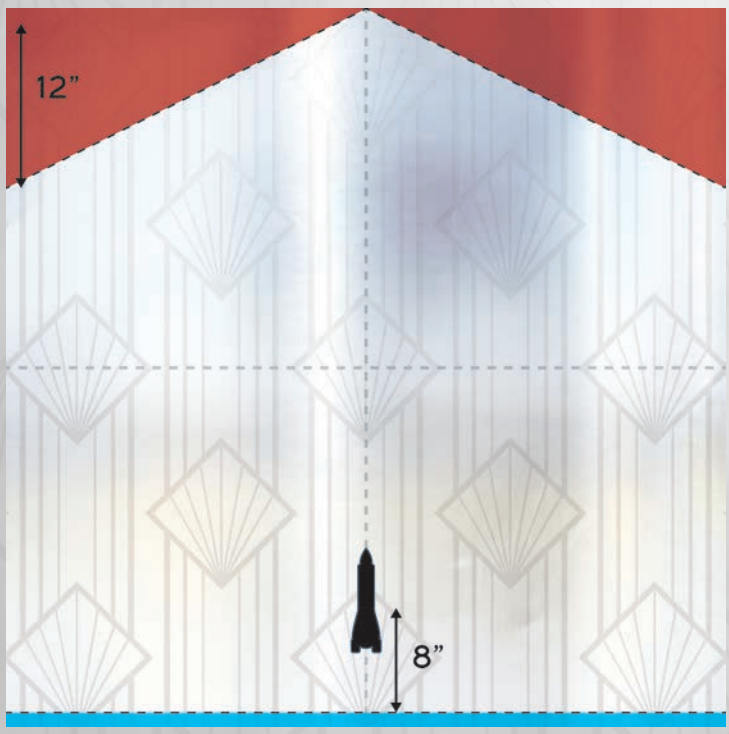

Scoring: Normal Scoring (Scenario Expansion 1).

Special Rules: The Provenance Ark loses its Boardable and Civilian Transport special rules. Players alternate controlling the Provenance Ark. Red players control it during each odd round and Blue players control it during each even round.

At the end of the Provenance Ark's activation, place a Small City within 8” of it. That City contains 2 Terraforming Zone Features with no special rules (use a blank or upside down feature token for this). Cities placed this way cannot be placed within 8” of another Dropsite.

The Provenance Ark cannot be moved out of the area marked in green.

Stop The Terraformer

Players: 1 Attacker in Red, 1 Defender in Blue.

Scenery: 6 Debris Fields 2-4 Micrometeor Clouds.

Deployment: Attacker deploys Staggered (Scenario Expansion 1). Defender deploys Backline (Scenario Expansion 1).

The Provenance Ark is deployed as per the diagram at the start of the game.

Scoring: Normal Scoring (Scenario Expansion 1), Kill Points Scoring (Scenario Expansion 1). The Provenance Ark is worth double Kill Points.

Special Rules: The defender starts the game with 2 Battalions on the Provenance Ark.

At the end of the Provenance Ark's activation, place a Small City within 8” of it. That City contains 2 Terraforming Zone Features with no special rules (use a blank or upside down feature token for this). Cities placed this way cannot be placed within 8” of another Dropsite.

Fauna Rules

This scenario uses a single Group of Living Vessel or Astrofauna, referred to as the Fauna. Players should agree on the Fauna Group size before the game where applicable. The Fauna has multiple States it can be in, shown below. When the Fauna activates, check the table below and follow the first applicable State (from top to bottom).

The Fauna does not follow the normal activation order and ignores any order-related parts of its Mind of its Own rule. At the start of the game, roll a D6, the Fauna activates after that many activations.

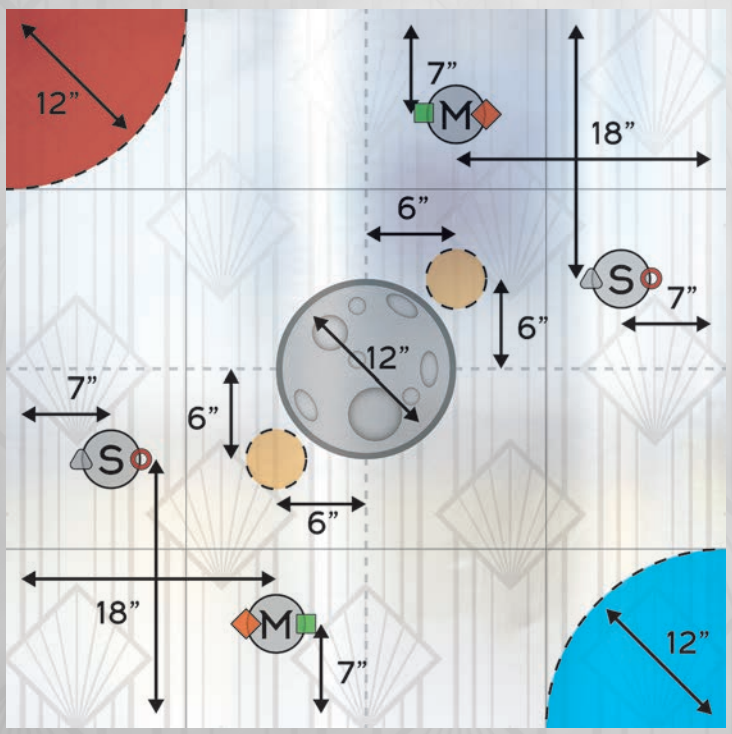

The Fauna can move over Large Objects as if they were not there but cannot end its movement on a Large Object.

If the Fauna has optional effects in its rules (e.g. you may...), the Fauna chooses to use those effects. The Fauna uses the maximum number of weapons possible against the target of its attacks.

State	Condition	Directions
Aggressive	If the Fauna is in base contact with one or more other Groups.	For each Group the Fauna is in base contact with, the Fauna attacks that Group. The Fauna activates again after D3 activations.
Chasing	If the Fauna has been attacked this round and is within 6" of a Ship that attacked it.	The Fauna faces, then moves up to its Thrust towards the closest Ship that attacked it. The Fauna then attacks that Ship's Group. The Fauna activates again after D3+2 activations.
Defending	If the Fauna has been attacked this round and is within 6" of a Large Object.	The Fauna faces, then moves up to half its Thrust towards the closest Ship that attacked it. The Fauna then attacks that Ship's Group. The Fauna activates again after the next 3 activations.
Panicked	If the Fauna has been attacked this round and is not within 6" of a Large Object or a Ship that attacked it.	The Fauna faces, then moves up to half its Thrust towards the nearest Group, or nearest Large Object, whichever is closer. It then attacks the closest Group. The Fauna activates again after the next D6 activations
Neutral	If the Fauna has not been attacked this round.	The Fauna faces, then moves up to half its Thrust towards the nearest Group. The Fauna activates again after 2D3 activations. Each time it is attacked, it activates 1 activation sooner.

Sacred Moon

A mining survey team has located rich metal deposits in a previously overlooked moon. Unfortunately a hostile creature has taken up residence on these deposits and is fiercely guarding its territory. Evict this monster and secure the moon so that mining teams can move in and properly exploit these resources.

Players: 2.

Scenery: 1 12" Large Object.

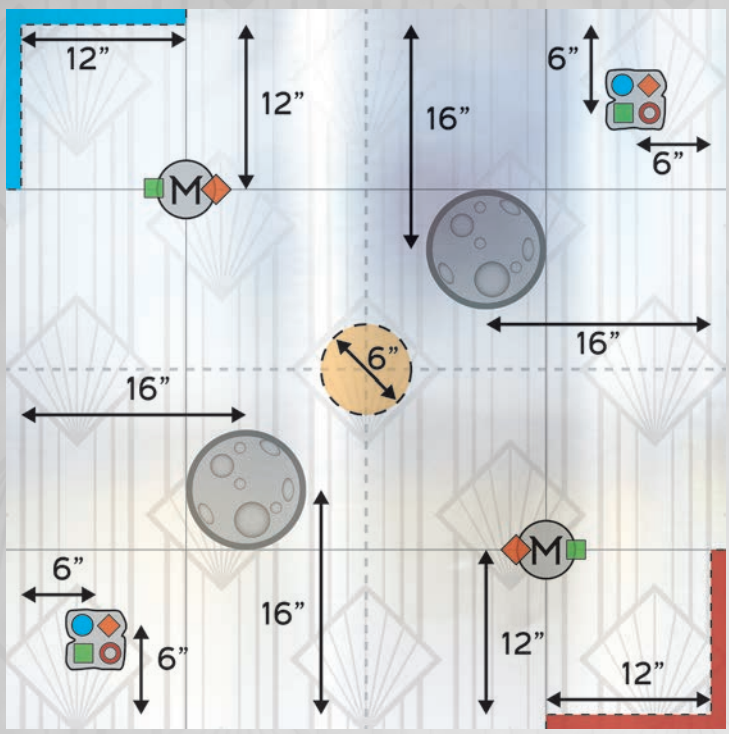

Deployment: Both players Imminent. The Fauna starts the game in coherency within one of the two 4" diameter yellow areas, chosen at random.

Scoring: Normal Scoring (Scenario Expansion 1) Each Scenario Space Station is a Focal Point with a range of 6" (Scenario Expansion 1).

Special Rules: This scenario uses Fauna Rules.

Hatching Grounds

Several creatures have made a nest out of a constellation of orbiting asteroids. Those asteroids have valuable materials that are a necessity for fleet construction and must be kept out of enemy hands at all costs. Deal with the fauna and defend the asteroids from interlopers.

Players: 2.

Scenery: 2 8” Large Objects, 2 Debris Fields, 2 Micrometeor Clouds.

Deployment: Both players Staggered. The Fauna starts the game in coherency within 3” of the centre of the table.

Scoring: Kill Points. Enemy Ships destroyed by Fauna are worth double their Kill Points.

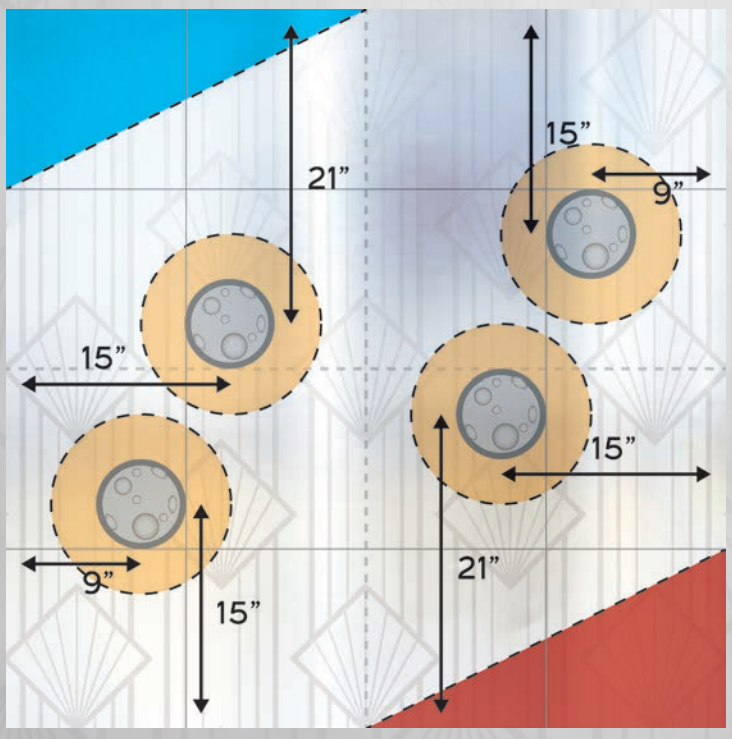

Each Large Object is a focal point with a range of 6”, measured from the edge of the Large Object.

Special Rules: This scenario uses Fauna Rules.

Each Large Object is a Dropsite. Treat the edge of the Large Object as if it was the centre of a Dropsite.

A Rocky Runaround

Fauna have been affecting shipping through an area rife with asteroids. While there is little of import here, the suspected lair of the culprit lies amongst the rocks and dust. Confirm its identity and neutralise the threat. Once it has been laid low, maintain control of the corpse until science teams arrive to examine it further.

Players: 2

Scenery: 4 6” Large Objects, 6 Micrometeor Fields.

Deployment: Both Players Close. At the start of the game, randomly determine a Large Object to deploy the Fauna in coherency within 3” of.

Scoring: Assess. Each Fauna can be Assessed as if it was a Dropsite. When a Fauna is destroyed, do not remove it, instead, it becomes a Focal Point with a range of 6” that can no longer be Assessed. Kill Points.

Special Rules: This scenario uses the Fauna Rules.

When Neutral, Fauna move towards the nearest Large Object. When Panicked, Fauna move towards the furthest of either the closest Group or second closest Large Object.

Variant: Use one Fauna per Large Object, placing each within 3” of its own Large Object.
