# Resistance Abilities

Famous and Faction Admirals may take additional Abilities from the following table when building your lists. Each Famous and Faction Admiral will state the amount of additional Abilities they may take. You can only take each Ability once per list.

| Cost | Effect |
|---|---|
| **2AP** | **Expert Repair Crews:** At the start of the Repair step of the End Phase, remove all Crippling effects from a friendly Group. |
| **2AP** | **Duct Tape and Bubblegum:** When a friendly Ship of M, H, or C tonnage is destroyed by damage from an opponent's attack (including any Crippling or Explosion Effects), it remains in play until the start of the End Phase. At the start of the End Phase, roll for explosion and remove that Ship from play. That Ship counts as destroyed. |
| ***AP** | **Redundant Ship Systems:** When you would roll for Crippling Effects for a friendly Ship (for any reason), after rolling, you may pay up to 3AP. Add or subtract 1 (to a minimum of 2) from the result of the roll for each AP paid this way |
| **1AP** | **Big Guns a' Blazing:** When you assign a Group's Weapon System with Damage 2 or higher to targets, double the Attack value of that Weapon System and that Weapon System has an unmodifiable Lock Value of 4+ and only causes criticals on a 6+ for this attack and cannot have its dice rolls modified in any way. If this Ability affects a Weapon System with an Arc of B, it costs an additional 1AP. If this Ability affects a Weapon System on a Ship of H or C Tonnage, this Ability costs an additional 1AP (additional costs are cumulative). |
| **1AP** | **Never Tell Me The Odds:** When you move a Group through Scenery you may re-roll any Kinetic or Energy saves for that movement. When you move/place a Wing through Scenery, you may re-roll the dice when rolling to remove those Assets. |
| **1AP** | **Missile Storm:** At the start of a friendly Group's activation, choose a Weapon System with "Missile" in its name. That Weapon System gains Fusillade-2 and Anti-Wing until the end of the Activation." |

# Resistance Admirals

## Resistance Engineer
### Admiral Level 1 – 25 pts

| Cost | Effect |
|---|---|
| * | This Admiral may take 1 additional Ability from the Resistance Abilities Table. |
| 1AP | **Subsystem Network:** Before you attack with a Group of M tonnage, pick two of its weapon systems with the same name without the Linked-X special rule. Those weapons gain Linked-SSN for that attack. |

## Resistance Artificer
### Admiral Level 3 – 65 pts

| Cost | Effect |
|---|---|
| * | This Admiral may take 1 additional Ability from the Resistance Abilities Table. |
| 1AP | **Manic Repairs:** When you activate a Group, all ships in that group gain Regenerate-2 until the end of the round. |
| 2AP | **Resistance Elite Force:** At the end of the round, remove 2D3 enemy Battalions from a friendly ship. |

# Resistance Launch Assets

| Load | Thrust | Att | Lock | DMG | Type | Special |
|---|---|---|---|---|---|---|
| Torpedo | 6" | 6 | 2+ | 1 | K | Penetrator |
| Bombers | 10" | 3 | 4+ | 1 | K | - |
| Fire Ships | 3" | 3 | 2+ | 1 | E | When this Load is shared with Bulk Landers, 2 Launch are needed to place 1 Fire Ship. |
| Mines | 3" | 5 | 4+ | 1 | K | - |
| Bombardment Torpedo | 6" | 4 | 5+ | 2 | K | Bombardment |

| Load | Thrust | Re-rolls |
|---|---|---|
| Fighters | 16" | 3 |

A fleet that includes Cassius Brown adds the following row to the table found in 7.4.1 Deploying Battalions

| Type | Target | Range |
|---|---|---|
| Firefist Assault Boats | Cities.<br>Ships and Space stations in the same Orbital Layer. | 3" |

# Resistance Deployable Features

| PTS | Type | ES | KS | Hull | Special |
|---|---|---|---|---|---|
| 10 | ICBM Silo | 5+ | 5+ | 4 | - |

| Load | Launch | Special |
|---|---|---|
| Bombardment Torpedo | 2 | Limited-6 |

Bombardment Torpedoes launched from this Feature can only attack Cities and cannot attack the Dropsite the launching Feature is deployed to.

Bombardment Torpedoes launched from this Feature become damage Type C when used against Cities at least 6" away from enemy Ships.

When an attacking Group or Asset/s attack would cause this feature to be removed, if it has any remaining Torpedoes, the attacking opponent may remove an additional Feature and any Battalions assigned to it from this Dropsite.

| PTS | Type | ES | KS | Hull | Special |
|---|---|---|---|---|---|
| 5 | Ark Lander | 4+ | 4+ | 4 | - |

When this feature is deployed to a Dropsite, 4 friendly Battalions are automatically deployed to that Dropsite.

While Activating Dropsites (during 7.5 Activating Dropsites), if you have more Battalions on this feature than any opponent, you count as controlling the Dropsite this Feature is deployed to. If multiple players count as controlling the same Dropsite this way, this effect is ignored.

| PTS | Type | ES | KS | Hull | Special |
|---|---|---|---|---|---|
| 10 | Scanner Dome | 5+ | 5+ | 4 | - |

When you assign any weapons to an enemy Ship/Group within 6" of this Dropsite, improve the Lock of those weapons by 1.

When you attack an enemy Descent Ship in Atmosphere within 6" of this Dropsite, instead of the usual penalties for attacking a City or a Descent Ship in Atmosphere (see paragraph 4 of 3.1.2 Atmosphere) that attack always hits on a 5+ and can never cause a critical (instead of a 6+).

*e.g. a weapon with Lock 3+ attacking a target in orbit within 6" of this Dropsite would improve its Lock to 2+. If that weapon was attacking a Descent Ship in Atmosphere within 6" of this Dropsite, it would always hit on a 5+ and will not cause criticals. A weapon with Bombardment attacking the same Descent Ship would hit on its Lock value improved by 1.*

| Typhoon Vasquez – Heavy Cruiser | 147 pts (45 + 102 pts) |
|---|---|
| Famous Admiral Level 2 & Heavy Cruiser | M / 40mm |

| Thrust | Scan | Sig | Hull | ES | KS | BS | G | Special |
|---|---|---|---|---|---|---|---|---|
| 5" | 10" | 6" | 13 | 3+ | 4+ | 6+ | 1 | Reinforced Armour |

| Name | Arc | Att | Lock | DMG | Type | Special |
|---|---|---|---|---|---|---|
| N-11 Artillery Cannon Turret | F/S | 3 | 4+ | 1 | K | Fusillade-1, Low Power, Linked-1 |
| N-11 Artillery Cannon Turret | F/S | 3 | 4+ | 1 | K | Fusillade-1, Low Power, Linked-1 |
| N-8 Artillery Cannon Bank | B | 6 | 5+ | 1 | K | Fusillade-2, Low Power, Volley-2 |
| N-8 Artillery Cannon Bank | B | 6 | 5+ | 1 | K | Fusillade-2, Low Power, Volley-2 |
| NC-1 Missile Rack | F/S/R | 3 | 3+ | 1 | K | Close Action |

## Bullet Baron

This ship must take two N-8 Artillery Cannon Banks, two N-11 Artillery Cannon Turrets, Ablative Armour, and a Scanner Array (that's been heavily jury rigged and does not take up a hardpoint or points).

| Cost | Effect |
|---|---|
| * | This Admiral may take 1 additional Ability from the Resistance Abilities Table. |
| **2AP*** | **Artillery Strike:** Before attacking with a Group, choose one of that Group's Weapon Systems with "Artillery" in its name. That Weapon System gains the benefit of its Fusillade rule and you may choose one of the following:<br>• That Weapon System's damage type becomes Core for that attack.<br>• That Weapon System and all of that Group's "Artillery" Weapon Systems gain Linked-SSN for that attack if they have no Linked value.<br>If that Weapon System is on a H or C tonnage Ship or a Group of 3 or more Ships, this ability costs 3AP. |

*Typhoon Vasquez is the Head Engineer of the Red Baron, a pre-war ship used as a test-bed for various ammunition types designed for then-current Artillery Cannons. Vasquez's Battlegroup contains a large number of industrial ships, including the Andar Errente, a pre-war Industrial Raft. Thanks to copious amounts of manufacturing ability, Vasquez is able to be very liberal with the application of the various bootleg munitions produced by his fleet.*

*Vasquez's combat capable ships were present at the Battle for Earth and managed to score several Scourge kills. The Red Baron spent most of the engagement firing on any and every cylinder it could find. Vasquez's battle tactics seemed to either be genius, drawing most of the Scourge return fire towards the Red Baron and its ablative armour, or the absolute lunacy of being on constant weapons-free.*

| Hagen – Tribune | 245 pts (45 + 200 pts) |
|---|---|
| Famous Admiral Level 2 & Battlecruiser | H / 50mm |

| Thrust | Scan | Sig | Hull | ES | KS | BS | G | Special |
|---|---|---|---|---|---|---|---|---|
| 7" | 6" | 6" | 15 | 3+ | 4+ | 5+ | 1 | Vanguard-3" |

| Name | Arc | Att | Lock | DMG | Type | Special |
|---|---|---|---|---|---|---|
| 9K Mass Driver Turret | F/S | 2 | 2+ | 2 | K | Critical-1, Penetrator |
| N-11 Twin Artillery Cannon Turrets | F/S | 6 | 4+ | 1 | K | Fusillade-2, Low Power |
| NC-16 Missile Bank | F/S/R | 6 | 3+ | 1 | K | Close Action, Volley-2 |

| Load | Launch | Special |
|---|---|---|
| Torpedo* | 1 | Limited-2 |
| Bulk Landers & Fire Ships | 2 | - |
| Fighters & Bombers | 2 | - |

*This Launch Asset is hidden internally and not present on the miniature.

| Cost | Effect |
|---|---|
| * | This Admiral may take 1 additional Ability from the Resistance Abilities Table. |
| 3AP | **Reinforce Systems:** When a friendly Ship of H or C tonnage would roll its Backup save due to an attack, improve its Backup save for that attack by 1. |

*The Flagship of the independent High Technician known as Hagen is believed to have once belonged to the Kalium Kabal. Though quite why they would relinquish a working Battlecruiser to independents is currently unknown to UCM intelligence. Any chance to communicate and question those in Hagen's fleet state that it was "empty when we found it" and that the ship is "legitimate salvage"*

*Regardless of how these independents acquired this ship, they seem more than capable of using and maintaining it. Having taken part in the battles above Luna, the Fortune's Fancy scored Hagen and his fleet several Scourge kills. The Fortune's Fancy is suspected to be highly modified, capable of carrying its standard launch compliment, along with a pair of internally stored torpedoes. Observations by the UCMF Saccharine show that these torpedoes are launched in the crudest way possible. Simply being allowed to float outwards from the bulk lander bays and fired while free floating.*

| Nguen – Olympus | 415 pts (75 + 340 pts) |
|---|---|
| Famous Admiral Level 4 & Grand Battleship | H / 60mm |

| Thrust | Scan | Sig | Hull | ES | KS | BS | G | Special |
|---|---|---|---|---|---|---|---|---|
| 5" | 8" | 8" | 24 | 3+ | 4+ | 5+ | 1 | - |

| 9K Mass Driver Turrets | F/S | 2 | 2+ | 2 | K | Critical-1, Penetrator, Volley-2 |
| Mega Vent Cannon Half Battery | B | 2 | 3+ | 3 | E | Overcharge, Fusillade-2, Reave-1, Volley-2 |
| Mega Vent Cannon Half Battery | B | 2 | 3+ | 3 | E | Overcharge, Fusillade-2, Reave-1, Volley-2 |

| Load | Launch | Special |
|---|---|---|
| Torpedo | 1 | Limited-4 |

## Extensive Reactor Modifications

If Hull points lost due to its Vent Cannon Batteries' Overcharge rule would cause this Ship to be destroyed, it rolls 3D3 for its explosion and that explosion also affects Ships in other Orbital Layers.

| Cost | Effect |
|---|---|
| * | This Admiral may take 2 additional Abilities from the Resistance Abilities Table. |
| 2AP | **Vent Cannon Mastery:** When you Overcharge a Group's weapon with "Vent" in its name, each Ship in the firing Group may Overcharge a second weapon this activation. |

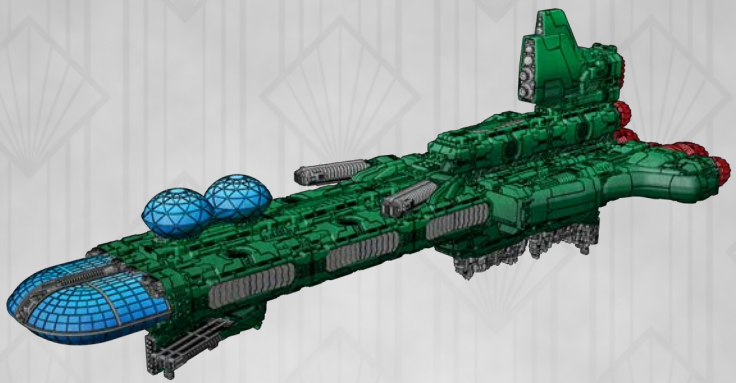

*Originally conscripted from one of the poorest locales on Kalium, Nguen has seen a meteoric rise through the ranks of the Kalium navy. He has proven himself time and time again for the Kabal, his first command would see him trade blows with the Shaltari in anti-piracy actions protecting valuable in-system shipping routes.*

*Since his start as a Vent Cannon technician, Nguen has gained an intimate understanding of the technology and physics behind the devastating weapons. Preferring commands on ships equipped with the unstable weapons, he's reduced scores of ships to molten metal, very few of which were his own*

*The defining point of his career was the destruction of a trio of scourge battlecruisers with his previous command, a Gladiator class Grand Cruiser. Suffering serious damage after the destruction of one and the crippling of another, a final volley of vent fire overloaded the ships reactor. Ordering the ship to fly at full thrust towards the third and the call to abandon ship, Nguen would soon watch the reactor consume both his ship and the enemy battlecruiser from the relative safety of his escape vessel.*

*Upon his return to Kalium, Nguen and his surviving crew would be assigned to the nearly complete Grosses Messer, overseeing its final reactor adjustments and being tasked with a live fire shakedown cruise.*

| Magellan – Coloniser | 570 pts (45 + 525 pts) |
|---|---|
| Famous Admiral Level 3 & Interstellar Dreadnought | C / 60mm |

| Thrust | Scan | Sig | Hull | ES | KS | BS | G | Special |
|---|---|---|---|---|---|---|---|---|
| 8" | 10" | 16" | 26 | 4+ | 4+ | 4+ | 1 | Command Ship-2, Vanguard-3" |

| Name | Arc | Att | Lock | DMG | Type | Special |
|---|---|---|---|---|---|---|
| 10K Mass Driver Turret | F/S | 2 | 3+ | 2 | K | Calibre-H/C, Critical-2, Penetrator, Volley-2 |
| 10K Mass Driver Turret | F/S | 2 | 3+ | 2 | K | Calibre-H/C, Critical-2, Penetrator, Volley-2 |
| Heavy Dual Vent Cannon Turret | F/S | 4 | 3+ | 2 | E | Fusillade-2, Overcharge, Reave-1 |
| Heavy Dual Vent Cannon Turret | F/S | 4 | 3+ | 2 | E | Fusillade-2, Overcharge, Reave-1 |
| NC-16 Missiles | F/S/R | 4 | 3+ | 1 | K | Close Action |

## Assault Carrier

This ship must take two 10k Mass Drivers, two Heavy Vent Cannons, a Drive Refit (that's been heavily jury-rigged and does not take up a hardpoint or points), and the following Launch Assets:

| Load | Launch | Special |
|---|---|---|
| Fighters & Bombers | 4 | - |
| Bulk Landers & Fire Ships | 4 | - |

| Cost | Effect |
|---|---|
| * | This Admiral may take 2 additional Abilities from the Resistance Abilities Table. |
| 2AP | **Magellan Expedition:** When you launch Bulk Landers from this Ship or a Ship within 6" of it, you may have that Ship launch an additional 2 or 4 Bulk Landers. Any Ship that does takes that much damage (causing Crippling Effects and Explosions where applicable). |

| Munifex | 19 pts |
|---|---|
| Corvette | L / 30mm |

| Thrust | Scan | Sig | Hull | ES | KS | BS | G | Special |
|---|---|---|---|---|---|---|---|---|
| 12" | 4" | 2" | 2 | 5+ | 5+ | - | 2-4 | Descent |

| Name | Arc | Att | Lock | DMG | Type | Special |
|---|---|---|---|---|---|---|
| NCA-1 Missiles | F/S/R | 4 | 3+ | 1 | K | Air to Air, Close Action |

***Recorded ships of the class:*** *Great Wall, Marston's Run (Independents), Hellhunter, Poison Dagger (Kalium)*

*Although the Resistance does operate corvettes, very few survived the Scourge invasion. Being designed to operate from atmosphere, they were the very furthest ships from any jump point and had to face the first waves of Scourge corvettes and Strike Carriers. Those that did escape were generally forced to withdraw early on due to combat damage.*

*However, such small ships require modest orbital slips to construct. As a result of the obvious need to protect their Strike Carriers, many Resistance fleets with the resources have attempted to build new ones, with mixed success. Certainly, the Vega Scrapfleet has proved capable, and of course Kalium builds these hunter-killers in large quantities. The Munifex is a fairly typical corvette – fast, atmospheric-capable and designed to kill Strike Carriers, as well as their opposite numbers. It is armed with specialist missiles, much like the UCM's Santiago class.*

| Seneca | 40 pts |
|---|---|
| Detonator | L / 30mm |

| Thrust | Scan | Sig | Hull | ES | KS | BS | G | Special |
|---|---|---|---|---|---|---|---|---|
| 12" | 4" | 2" | 2 | 5+ | 5+ | - | 1-3 | Descent |

| Load | Launch | Special |
|---|---|---|
| Fire Ships | 2 | - |

## Explosive

When this ship is destroyed, it explodes with a range of 3" and rolls 1D3+1 on the Explosion Effect table.

***Recorded ships of the class:*** *Surprise, Abra Kadabra, Boombox (Independents), DS-1, DS-2 etc, (Kallium, no prose names bestowed)*

*Though lacking in military resources, most fleets scattered by the Scourge invasion had a high proportion of merchantmen - rightly more likely to run than engage. Forced to be inventive, ragtag Resistance groups sought to repurpose civilian vessels to military ends. Haulers often make poor gun platforms but offer capacious internal holds. When combined with 'repurposed' shuttles, yachts and small transports, a formidable weapon can result: the Detonator, a hive of remote-operated, explosive-packed fire ships. The most common vessel is a Seneca class - unweildy and utilitarian, it offered pre-war traders the largest storage for the lowest cost, although many other patterns are in service in this unlikely role.*

*Crewing a repurposed flimsy brick fizzing with improvised time bombs is not for the sane and/or skittish. These individuals are treated with wary respect when on shore leave, notable in the bar due to singed hair - if they've survived to douse their burns in booze. In the service of Kalium, Detonators are employed in an altogether more sinister, regimented fashion, which says a lot of how much the Kabal values flesh and blood.*

| Newton | 46 pts |
|---|---|
| Kill-Sat | L / 30mm |

| Thrust | Scan | Sig | Hull | ES | KS | BS | G | Special |
|---|---|---|---|---|---|---|---|---|
| 4" | 8" | 4" | 4 | 4+ | 6+ | - | 1-3 | Monitor, Vanguard-4" |

| Name | Arc | Att | Lock | DMG | Type | Special |
|---|---|---|---|---|---|---|
| XN-40 "Godray" Orbital Mass Driver | F | 1 | 3+ | 3 | C | Alt-1, Calibre-H/C |
| XN-40 "Godray" Bombardment Mass Driver | F | 1 | 4+ | 3 | E | Alt-1, Bombardment, Critical-1, Penetrator |

***Recorded ships of the class:*** *His Apple, Principia, Spear of Gabriel (Independents), Forgehammer, Portcullis, Rampart (Kalium)*

*The Newton was the most common pre-war naval defence monitor in the service of mankind. Unlike modern monitors, the class is visually closer to a space station than a ship, suiting its near-static mission profile. With the speed of the Scourge invasion, few could manoeuvre into a firing position - unfortunate since it packs an enormous mass driver for a frigate-sized vessel. The XN-40 "Godray" was designed to destroy incoming targets long before they could return fire. It sits on a swivel mount, allowing not only tracking of deep space, but precise bombardment of surface targets. Pre-war this was largely used to quell any thoughts of insurrection or to level inhospitable landscape prior to surface exploration.*

*Today, the Newton still brings incredible firepower for its cost, at the price of speed and survivability. This gives it a valued place on the gun line of any Resistance or Kalium admiral capable of harnessing this ship's strengths. Although unwieldy to bring to a forward position, its bombardment and anti-shipping firepower can lend the class a new lease of life in an offensive role.*

| Galileo | 55 pts |
|---|---|
| Orbital Telescope | L / 30mm |

| Thrust | Scan | Sig | Hull | ES | KS | BS | G | Special |
|---|---|---|---|---|---|---|---|---|
| 4" | 12" | 4" | 4 | 4+ | 6+ | - | 1 | Detector, Monitor, Rare |

## Space Telescope

This ship counts as having a single weapon for its Detector rule. When this ship uses its Detector rule, it may place an additional Spike on that Group, or it may place a Telescope token on that Group.

## Telescope Token

When you assign any number of weapons to a Group that has a Telescope token, you may remove a Telescope token. If you do, choose one of the attacking Group's Weapon Systems. That Weapon System lowers the result required to score a critical against the assigned Group by 1 for that attack (so a weapon that would crit on a 5+ crits on a 4+ instead).

Telescope tokens placed by this Ship persist between rounds and are only removed when this Ship would place another Telescope token or when a Ship with a Telescope token goes on the Silent Running order.

***Recorded ships of the class:*** *Amber Eye, Hubble IX, Magellan (Independents), All-Seeing, Lens of Truth, Nightpiercer (Kalium)*

*Galileo orbital telescopes are among the oldest human ships still flying. In the earliest days of foldspace exploration, jumps to un-noded locations had to be conducted in drive-wearing 'hops' or random inaccuracy would result. Surveying potential jump locations for potential and celestial threats necessitated a ship built around a gigantic, high-power scanner. Speed was unimportant, so the superstructure of the more common Newton class monitor was chosen as an efficient, low-cost base. Never a military vessel, the Galileo is unarmed besides basic point defence.*

*Surviving Galileos were vital to stranded Resistance fleets forced to use archaic jump-hops to seek the meagre resources not already discovered and either captured by the Scourge or (as with the Colonies) had their node codes changed. Being able to detect enemy activity from a vast distance is also of great use to those small remnant fleets hiding in the cracks of the galaxy - lest they be ambushed. At battlespace level, such observational power can be turned on in-system targets to achieve extraordinary definition unachievable with smaller hardware. This can augment Resistance vessels' older scanning technology and aid a skilled captain in targeting vulnerable spots on enemy ships.*

| Sagitarii | 30 pts |
|---|---|
| Cutter | L / 30mm |

| Thrust | Scan | Sig | Hull | ES | KS | BS | G | Special |
|---|---|---|---|---|---|---|---|---|
| 16" | 4" | 4" | 5 | 4+ | 6+ | - | 1-3 | Vectored |

| Name | Arc | Att | Lock | DMG | Type | Special |
|---|---|---|---|---|---|---|
| N-12 Artillery Cannon | F | 4 | 4+ | 1 | K | Fusillade-2 |

***Recorded ships of the class:*** *Hammerfall, Surging Spear, Swiftstar, Tentative V (Independents), Kabal's Knife, First Message, Wrathful (Kalium)*

*The Sagittarii is essentially an engine bank with a weapons suite attached to the prow. Extraordinarily fast (especially for a Resistance vessel), almost all the ship's power is consumed by the drives, necessitating a low power primary armament. Fortunately, pre-war designers still used crude, chemical-based guns and they mounted four of the largest in fixed-forward positions. Though much fatter, the N-12 cannon offers destructive parity with modern medium mass rivers.*

*Built in various configurations over the years, the Sagittarii is a typical pre-war cutter, if 'typical' can even be applied to such a specialist ship. Cutters were bulkier and actually more common in the EAA Navy than in the modern UCMF, since speed could compensate for inferior scanning technology in first strike missions. Many escaped the Scourge invasion using that speed and have been valued assets to the Resistance ever since. Kalium's Kabal appreciate the brutal simplicity of the design, so still manufacture them new in state-run yards.*

| Baleares | 52 pts |
|---|---|
| Pocket Carrier | L / 30mm |

| Thrust | Scan | Sig | Hull | ES | KS | BS | G | Special |
|---|---|---|---|---|---|---|---|---|
| 16" | 4" | 4" | 5 | 4+ | 5+ | - | 1-3 | Vectored |

| Load | Launch | Special |
|---|---|---|
| Fighters | 2 | Alt-1 |
| Bombers | 1 | Alt-1 |
| Mines | 1 | Alt-1 |

***Recorded ships of the class:*** *Far Erie, Windbringer, Racing Steed (Independents), Vlad Carmichael, Insurrection's End, Sender of Will (Kalium)*

*Add a massive engine bank to a set of launch bays and you have the Baleares, a carrier whose strike craft are self-powered. Even today, the Baleares is one of the fastest carriers in mankind's fleets and embodies the concept of the pre-war pocket carrier.*

*Typically, a carrier will operate beyond line of sight or shielded within the fleet to strike at the enemy's centre. Since almost nothing can keep pace with the Baleares, it fights quite differently and offers unusual advantages. Baleares captains use their speed to break out from the main fleet, surge forward and launch their daring waves at small, rearguard support vessels. These targets usually offer little point defence, making them vulnerable to strike craft though they are usually beyond their range - not so with the Baleares.*

| Armstrong | 70 pts |
|---|---|
| Destroyer | L / 40mm |

| Thrust | Scan | Sig | Hull | ES | KS | BS | G | Special |
|---|---|---|---|---|---|---|---|---|
| 9" | 6" | 4" | 6 | 4+ | 4+ | 6+ | 1-3 | Rare |

| Name | Arc | Att | Lock | DMG | Type | Special |
|---|---|---|---|---|---|---|
| HF-8 Clearance Laser (Focused) | F | 4 | * | 2 | E | Alt-1, Burnthrough-1, Calibre-L/M, Mauler |
| HF-8 Clearance Laser (Wide) | F | 6 | 3+ | 0 | E | Alt-1, Anti Wing |

## Debris Clearance

Once per game, this Ship may forgo any attacks it may make. If it does, instead of attacking, this Ship may replace a piece of Debris Field within 6" (measuring to the edge of that Debris Field) with a Micrometeor Cloud of approximately the same size in the same location, or remove a piece of Micrometeor Cloud within 6" from the table.

***Recorded ships of the class:*** *Apollo 11, Tranquility, Saturn*

*The Armstrong, Aldrin and Collins are some of the earliest human starships still in service; dating back to the late 24th century, they were designed for endurance exploration. Every UCM Colony was discovered by hit and miss expeditions, requiring many semi-random foldpace jumps until a usable world could be found, explored and given a node. Such dependable hardiness ensured three centuries' service. In size and capability they equal a modern destroyer, though in displacement they are more akin to cruisers due to multiple redundancies, cavernous storage and antique tech.*

*The Armstrong class was usually the first ship to make a jump before others followed its onboard node. This was due to its prodigious laser cluster, charged to obliterate any hazards at the jump point. Later, Armstrongs would begin the long, arduous task of clearing orbital debris before surface landings. Today, weapons designed to atomise thousands of tons of asteroid are better put to use in the much more immediate task of slicing hulls and fighting back enemy fighters, bombers and munitions.*

| Aldrin | 75 pts |
|---|---|
| Colony Ship | L / 40mm |

| Thrust | Scan | Sig | Hull | ES | KS | BS | G | Special |
|---|---|---|---|---|---|---|---|---|
| 9" | 6" | 4" | 6 | 5+ | 5+ | 6+ | 1-2 | Descent |

| Load | Launch | Special |
|---|---|---|
| Bulk Landers | 4 | - |

***Recorded ships of the class:*** *Endeavou, Endurance, Odyssey*

*In many cases, the first humans to set foot on one of the UCM's colonies did so from a bulk lander deployed by an Aldrin class colony ship. These hardy ships formed the vanguard of most expeditions and were deployed when a world looked suitable for habitation or exploitation. Bulk landers were preferred to dropships in those halcyon days, since advanced opposition was unlikely and heavy machinery was always needed planetside.*

*Today, the Aldrin offers the capacity of a troopship in a package the size of a destroyer, possible since these ships were never designed for open warfare so offer additional space. Being below cruiser sized, they can also operate in atmosphere, protecting them from void weapons fire. Built to a standard not seen since the exploration days, they can withstand abuse no modern civilian vessel could survive.*

| Collins | 56 pts |
|---|---|
| Support Carrier | L / 40mm |

| Thrust | Scan | Sig | Hull | ES | KS | BS | G | Special |
|---|---|---|---|---|---|---|---|---|
| 9" | 6" | 4" | 6 | 4+ | 5+ | 6+ | 1-2 | Rapid Drop |

| Load | Launch | Special |
|---|---|---|
| Fighters & Bombers | 1 | - |

## Wing Support

Friendly Fighters within 6" of this Ship can be used for Close Protection against any Kinetic weapons (in addition to Close Action and Bomber attacks). When friendly Fighters within 6" of this Ship are used to remove enemy Bombers, each Fighter removes 2 Bombers instead of 1. When friendly Bombers (of any type) within 6" of a Ship with this rule attack, they Saturation Fire when there are 5 or more Bombers in the attack instead of 6.

***Recorded ships of the class:*** *Wasp, Gemini, Eagle*

*The expeditionary fleets of the late 24th century were designed for endurance and self-sufficiency in unexplored space. Stocky Collins support carriers carried swarms of resupply tankers to keep the fleet's shuttles, cartographers and escorts in the air when far from their carriers. These aging exploration vessels proved priceless in the Resistance's years evading the Scourge, finding refuge and hunting resources - every aspect of their design matched the challenge.*

*Support Carriers were especially prized - any sensible admiral maintained a fighter picket for early warning and defence. In addition, the tough fuel haulers and engineering wings support carriers could deploy were endlessly useful - that so many creaking dinosaurs still comprise Resistance fleets is a testament to their value. In combat, these unsung heroes can keep a fighter screen fuelled and re-armed long after unsupported squadrons would need to bug-out. Although the Collins is able to launch a mass of smaller ships, it lacks the internal space to house a fleet of its own, filled with fuel tanks and masses of repair bays. So more often than not, a Collins is seen aiding the defence of larger carriers.*

| Guy Fawkes – Parliament | 85 pts |
|---|---|
| Fire Ship | L / 40mm |

| Thrust | Scan | Sig | Hull | ES | KS | BS | G | Special |
|---|---|---|---|---|---|---|---|---|
| 11" | 6" | 4" | 6 | 2+ | 2+ | 6+ | 1 | Hero, Unique |

| Name | Arc | Att | Lock | DMG | Type | Special |
|---|---|---|---|---|---|---|
| Explosive Detonation | F/S/R | 3 | 3+ | 1 | C | Close Action, Critical-1 |

## Explosive Detonation

After completing an attack with this weapon, this Ship explodes with a range of 6" and an amount of Fuel Detonation effects equal to the amount of hits this weapon scored in its attack, counting each hit result of a 6 as two hits.

## Set Timers And Run

Once you complete an attack sequence with Explosive Detonation, remove this ship from the game. If there is a friendly Ship within 8" of this Ship, place a Fawkes' Crew Battalion on that Ship. This ship only counts for Ships killed when Fawkes' Crew Battalion is removed from the game.

## Skeleton Crew

This Ship can only go on General Quarters.

***Ships of the class:*** *Parliament (and its many successors)*

*Guy Fawkes, clearly not his real name, is infamous for one thing—blowing battleships to smithereens with massive fire ships, laughing. His small, eager crew of plastique-happy privateers are backed by a personal deep space shipyard kitted out for packing ships with explosives and up-armouring them enough to survive a one-way charge towards any enemy of any sufficiently flushed benefactor. Fawkes prefers old colony ships as candidates given their cavernous holds. To their creaking frames his engineers affix laughably thick frontal armour plates, having freed up mass by tearing out crew quarters, weapons, spares, and anything needed for long-term operations.*

*In combat, Fawkes flies his ship-sized munition personally alongside an insanely loyal, or just insane, skeleton crew. They all jump ship in escape pods at the last possible moment, coordinating with a nearby friendly vessel to collect them so they might do it all again another day. He's currently on Parliament XIII with no indication he might retire for the quiet life among his explosively gotten gains.*

## Hardpoints

Ships with Hardpoints may take options from the corresponding tables paying the applicable points cost. Each ship in a group must take the same Hardpoint options.
A Ship may only take **one of each** of their Hardpoint options marked with a * (so could take a Scanner Array and Ablative Armour for example).

| Dropships | 1 | - |

***Recorded ships of the class:*** *Little Marvel, Perseverance, Listener (Independents), Switchblade, Noble Conscript, Guardsman (Kalium)*

*As with cruisers, the sheer variety of frigate designs in service with the Resistance is staggering. Similarly, it's best to discuss them in terms of capability and armament. Many of these ships were originally civilian-grade, but have since had weapons added in response to dire need.*

*All Resistance frigates are faster than cruisers, offering a first strike/ flanking option. They are often used to seek and destroy key enemy vessels early in an engagement, to protect the larger ships in the fleet. Their weapons basically define their role and mode of attack, be that aggressive close-action or standoff fire. In this context, the term "frigate" also encompasses Strike Carriers and unarmed Electronic Warfare Ships.*

*A common pre-war practice was the production of Heavy Frigates, heavily armoured often with two main weapon systems. These have fallen out of favour with the UCMF due to high cost and the drain of dual weapons systems on engine power.*

## Hardpoints

This ship must take a total of three options from the Cruiser Systems list. A maximum of two options from the Broadside Hardpoint categories may be taken and up to two options may be taken from the Structures category.

***Recorded ships of the class:*** *Martian Wind, Defiance, Equatorial (Independents), Hardrada, Necromancer, Purgatory (Kalium)*

*Designs for Resistance cruisers are widely varied, to the point where listing each variation ever sighted would be as expansive as a list of each individual admiral in the galaxy. As such, it's best to describe them in general terms, focused more on their capabilities and armaments than form.*

*In this context, a "cruiser" means anything from a Heavy Cruiser to a Light Cruiser, as the UCM would classify them. A further complication is the optional presence of ablative armour panels, adding the classification of "armoured" to the description. Typically, all Resistance cruisers offer respectable survivability, low cost and a broad choice of weaponry. However, their outdated designs do show in poor scan range and limited point defence.*

*Some of these vessels have been adapted from civilian service, generally by adding weapons. Such modified ships often have ablative armour added to overcome their relatively weak designs. Kalium also produces many such low-spec vessels for direct military use, which perform similarly to these adapted ships. This keeps costs low, giving the Kabal numbers to boast over.*

***Only ship of the class:*** *Kabal's Deliverance*

*Although Kalium's military has no branches, ranks tend to reflect an individual's area of operations. Therefore, it is unusual for a decorated general to command a warship, but Kabal's Deliverance is no ordinary vessel. Colonial observers reckon her to be a highly visible statement of Kalium's prowess, although most suspect her to be impractically costly. Everything about this ship is elite, from its two 'Long Nine' extended mass driver turrets to its upgraded drive cluster to its superlative, and uncharacteristic, build quality. Brown himself earned the respect of even the PHR during the Battle for Earth, ultimately leading the month-long defence of New St Petersburg until he lost both legs to plasma fire. Kalium's prosthetics are cumbersome, so he now conducts operations from his command chair with cold, hardened efficiency.*

*The Deliverance's payload is no less elite. Aboard is a full and unique cohort of the Kalium XIth Legion—the Honoured Ten Thousand. These veteran warriors have each demonstrated unwavering loyalty to the Motherworld by receiving brutal combat injuries and returning to frontline service with distinction. Each is given superior gear and is worth three regular conscripts at least. They use the Deliverance's newly developed, armoured Firefist assault boats to conduct surface operations or launch devastating boarding actions.*

## Drive Refit

This Ship may take an Engine Refit for +25 points, increasing its Thrust by 3".

## Remnant

This ship may be used in UCM or PHR fleets in addition to Resistance fleets. In UCM and PHR fleets, they gain the Rare special rule.

***Recorded ships of the class:*** *Pilum, Fontaine's Miracle, Myriad (Independents), Proudcore, Industry, Fist of Iron (Kalium)*

*The Centurion was the most common standardised vessel of cruiser tonnage in the pre-war EAA Terran Grand Fleet. In those days the definition of Cruiser was somewhat broader; today, such a bulky vessel is designated as a Grand Cruiser, a classification not really in use with the UCMF. In bulk (though not in firepower), it is more akin to a modern Heavy Cruiser. It has truly excellent ceramic armour plating that outclasses all but defence monitors in the modern UCMF. The Centurion also features many of the typical advantages and disadvantages of vintage naval architecture. Originally manufactured by Trident Industrial over Olympus Prime, the design was soon licensed to Earth-based Equatorial Yards Inc. Only the licensed Earth pattern is still built today, by Kalium, though it also operates legacy Olympus Centurions.*

*Its simple but effective all-gun primary armament provides an excellent blend of destructive power and reliability. The class requires low weapon maintenance - a welcome factor that certainly isn't the case with some of the more esoteric and experimental armaments in mankind's pre-war arsenal.*

*Its primary armament is broadsides of transition mass drivers, alongside an oversized twin pure mass driver turret, more in keeping with modern UCMF gunnery, albeit with much heavier projectiles.*

## Drive Refit

This Ship may take a Drive Refit for +25 points, increasing its Thrust by 3".

***Recorded ships of the class:*** *Atomheart, Fusion Queen (Independents), Incinerator, Hell's Fury, Vengefire (Kalium)*

*The Gladiator was a limited production test-bed for Vent Cannon technology, developed from the Centurion class by Equatorial Yards inc. At the time, it was hoped that they could eventually replace all guns that used physical munitions. However, the number of accidents and dangerous internal meltdowns convinced the EAA to shelve the concept of an all-Vent-Cannon ship such as the Gladiator, since it has no other weapons should the core grow unstable.*

*The Resistance has been able to overlook these flaws, given the advantages the class offers. Without physical munitions, it never needs ammunition resupply so can operate offensively more or less indefinitely, providing its cores are maintained. Also, Vent Cannons are especially devastating, if unreliable. Such power is particularly attractive to Kalium – the rogue Colony has produced fully three times the number of this class than were laid-down before the Scourge invasion.*

## SWACS

Enemy ships within 12" of this ship may be targeted by friendly ships firing Close Action weapons using the firing ship's normal Weapon Range (Scan + Sig).

***Recorded ships of the class:*** *Project 26-02, Dark Side of the Moon, Regretful Necessity (Independents), Kabal's Judgement, Ultimate Certainty, Streetsweeper (Kalium)*

*The Senator was classified at the time of the Scourge invasion and for good reason. The class was an affront to many EAA government cornerstones. Though records were lost in the invasion, historians believe the Senator was secretly developed by Earth Fleet Command's shadowy Section Green, without civilian government knowledge. If true the military was preparing contingencies for city-wide insurrections; if not the government was. Some whisper that a military coup was tabled and this was an anti-uprising deterrent, though the Scourge put paid to anyone's plans. Though comparatively rare then, most Senators survived the invasion since friendly fire on a biblical scale would have resulted if such terrors were used in "defence". Kalium is rumoured to build these new - disquieting, if unsurprising.*

*The Senator carries three armoured VX nerve agent torpedoes packed with dispersal cluster bomblets. If detonated over a city, any contact with the agent results in spasms, vomiting, paralysis and asphyxiation, leaving infrastructure untouched. As a terror weapon, the Senator carries no significant long range anti-ship firepower, but does include powerful missile turrets for close defence. Combat doctrine stressed the use of the Senator's then advanced detector array to warn of enemy vessels, or roving reporters after the scandal of the century.*

| Triumvir | 180 pts |
|---|---|

## Repair Bay

Friendly Ships within 6" and on the same Orbital Layer that roll to repair Crippling Effects improve the result of the roll to repair those Crippling Effects by 2.

Friendly Ships that end their activation within 6" of this Ship on the same Orbital Layer recover 2 lost Hull Points.

## Box Of Scraps

At the end of this ship's activation, pick one friendly ship within 6" in line of sight (including this one). Place a Box Of Scraps token next to that ship. The next time that ship would be destroyed due to damage, it isn't. Instead, before continuing to inflict damage, remove the Box of Scraps token and that ship remains in play with D3 Hull Points remaining, then continue inflicting damage as normal. Box Of Scraps tokens persist through rounds but a ship may only have 1 Box Of Scraps token.

***Recorded ships of the class:*** *Brunel, Eiffel, Stephenson (Independents), People's Beneficence, Kabal's Wisdom, As One (Kalium)*

*The Triumvir has been one of the most valued ships to the Resistance since escaping the Scourge invasion. Shipyards mostly being a lost luxury, any repairs had to be run in the void with the help of other ships - the Triumvir's specialty. Though a military vessel with fighting armour and battlecruiser tonnage, most of its superstructure is dominated by an insectile bank of extending service armatures. Long-term, Triumvirs can run complex repairs that take weeks. In battle they inject expanding, rapid-cure polymer foam into hull breaches, armour cracks and voided areas, keeping a ship in the fight longer. Despite their value beyond the battlespace, many Resistance admirals gladly risk fielding Triumvirs for the sake of the greater good.*

*To support its activities, the Triumvir has a large internal hangar for various service craft from shuttles to engineering barges. Triumvirs that go to battle tend to replace some of these with regular fighters and bombers to add offensive and escort capability.*

***Recorded ships of the class:*** *Last Bastion, Reliance, Starblade (Independents) Hammer of Might, Decimator (Kalium)*

*Sharing many superstructure elements with the smaller Centurion Grand Cruiser, the Phalanx was one of the largest standardised classes produced by Trident Industrial, though today it's only built in Kalium's yards. Pre-war Battlecruisers differ from modern types in that they are slower and offer less firepower in manoeuvre, but far superior toughness. Indeed, it's best to think of them as pocket-battleships rather than specialist, aggressive ships.*

*The Phalanx is armed with long broadsides of transition mass drivers and four Titanmetall 9K mass drivers in two traversable turrets. In combination, the class can unleash withering fire against multiple targets, given the right positioning.*

***Recorded ships of the class:*** *Caesar's Eagle, Bashir's Prize (Independents) Gladiator, Lord Regent, Junta (Kalium)*

*The Tribune is heavier, slower and tougher than modern battlecruisers. It shares a superstructure and one mass driver turret with the more common Phalanx class. The remainder of its firepower comes from two conventional cannon turrets and an increased close action capability.*

*However, the Tribune is unusual for a full combat ship of this size in that it features capacity for bulk landers. Its only real modern descendants are the PHR's assault troopships. In addition though, the Tribune has a significant flight deck, making it a fleet carrier as well. In combination, the Tribune is a jack of all trades, able to adapt to fluid combat situations better than most ships.*

## Repair Bay

Friendly Ships within 6" and on the same Orbital Layer that roll to repair Crippling Effects improve the result of the roll to repair those Crippling Effects by 2.

Friendly Ships that end their activation within 6" of this Ship on the same Orbital Layer recover 2 lost Hull Points.

## Box Of Scraps

At the end of this ship's activation, pick one friendly ship within 6" in line of sight (including this one). Place a Box Of Scraps token next to that ship. The next time that ship would be destroyed due to damage, it isn't. Instead, before continuing to inflict damage, remove the Box of Scraps token and that ship remains in play with D3 Hull Points remaining, then continue inflicting damage as normal. Box Of Scraps tokens persist through rounds but a ship may only have 1 Box Of Scraps token.

***Recorded ships of the class:*** *Musashi, Endurance II (Independents), Loki, Proud Empress (Kalium)*

*Once among the mightiest ships ever built by mankind, the Musashi is now a relic, even among resistance fleets. Introduced in the mid-24th century, around the time of first contact with the Shaltari, the youngest of these veterans is over 300 years old. However, they were overbuilt for the rigours of exploration and have proven supremely reliable. Its broadsides of chemically fired N-12 cannons are undemanding workhorses with a low power draw, so most Musashi's spinal turrets have been refitted with 9K mass drivers over the centuries.*

***Recorded ships of the class:*** *Yorktown, Missouri (Independents), Black Prince, Scharnhorst (Kalium)*

*Like other Old Battleships, the Lexington could rightly belong in a museum, although it's still a formidable warship today. Many survived the Scourge invasion since they were mostly relegated to frontier picket duty, being outmoded even then. In the hard centuries that followed, the Lexington has proven its worth countless times, offering a reliable loadout of NC-16 missiles, a single ventral torpedo, and a fair-sized strike craft hangar. The negligible power drain of all of these gives the class excellent toughness, endurance, and utility for its age.*

| Iowa | 155 pts |

| NC-16 Missile Battery | F/S/R | 3 | 3+ | 2 | K | Close Action |

***Recorded ships of the class:*** *Ardent, Queen Bess (Independents), Iowa, Great Founder (Kalium)*

*Much rarer than its sister classes, the Iowa was the earliest known testbed of vent cannon technology. It mounts a pair of turreted heavy vent canons by dispensing with any broadside armament, freeing up space for a much enlarged, antique power core. Ventral NC-16 missiles complete the Iowa's armament, given their negligible power drain. Like all Old Battleships, the Iowa has poor scanners and point defences by modern standards, necessitating careful use.*

***Recorded ships of the class:*** *Fireheart, Einstein (Independents), Nikola Tesla, Hyperion (Kalium)*

*EAAS Vanguard was once the only example of her class. A development of the earlier Iowa, she incorporated vent canon broadsides and what was once a state-of-the-art power core. She proved unstable due to her armament and insufficient cooling and was ultimately lost with all hands over Eden Prime during the Scourge invasion. However, her plans were widely available due to her age, and since then, many foolhardy and/or bloodthirsty resistance admirals have converted Musashis and Lexingtons into Vanguards using more recent cores and custom-built vent canons.*

## Engine Refit

This Ship may take an Engine Refit for +45 points, increasing its Thrust by 2".

***Recorded ships of the class:*** *Victory II, Trafalgar (Independents), Might of Kalium, Steel Fist (Kalium)*

*Mankind built hundreds of what today are termed Old Battleships to guard its expansion into the cosmos. However, once relations with the Shaltari soured, humanity found itself woefully outgunned. Rather than go through a costly, counter-productive scrapping process, many old battleship hulls were hastily twinned around a newer, much improved central power core. This allowed these new Grand Battlehips, the first of their kind, to mount improved scanners, armaments, and point defences while offering substantial survivability. The Nelson is the most common survivor among these trailblazers, being built around a pair of Musashis*

## Engine Refit

This Ship may take an Engine Refit for +45 points, increasing its Thrust by 2".

***Recorded ships of the class:*** *My Masterpiece, Invention Number Four (Independents), Killforge, Our Grace (Kalium)*

*Yi Sun-Sin is a UCMF class designation for a Nelson class Grand Battleship that has since had its broadsides refitted with vent canons. Such a class did not exist in the days before the Scourge invasion—it's entirely the product of kill-hungry resistance admirals who don't mind the odd fatality due to chronic overheats from weapons discharge. Disturbingly, Kalium seems to have similarly converted several of the Nelsons it inherited when it seceded from the nascent UCM. The Kabal's readiness to trade losses for victory perfectly matches the unstable savagery of this colossus.*

| Barbarossa | 240 pts |
|---|---|

## Engine Refit

This Ship may take an Engine Refit for +45 points, increasing its Thrust by 2".

## Scanning Systems

When this Ship uses its Detector special rule, you may place an additional two Spikes on a different enemy Group in line of sight.

***Recorded ships of the class:*** *High Eagle, Eye of God (Independents), Our Gaze, Illuminator (Kalium)*

*A specialist variant of the Nelson, the Barbarossa replaces the power-hungry, early mass driver turrets with NC-16 missiles. In addition to offering increased lethality at close range, this frees up power for an enormous scanner array. Unlike most vessels with a detector role, the Barbarossa typically fights at the forefront of any engagement, caring little for the increased visibility that comes with running active scanners due to its already vast signature. To fully utilise the remaining power, the class's lethality was further bolstered by a pair of chin-mounted vent canons.*

| Farragut | 210 pts |
|---|---|

## Engine Refit

This Ship may take an Engine Refit for +45 points, increasing its Thrust by 2".

***Recorded ships of the class:*** *Endeavour, Tribe Bane (Independents), Hammer of Reason, Subjugator (Kalium)*

*Developed alongside the Barbarossa, the Farragut offers a more straightforward weapons loadout with surplus power capacity. This surplus and the relative simplicity of its armaments gave the Farragut legendary endurance and has made it a favourite of Resistance fleets. Offering the same quad-turret NC-16 battery and NC-12 broadsides as the Barbarossa, the Farragut also mounts six enormous torpedoes in three tubes, allowing for two devastating spreads. Few ships can survive a single salvo from this ancient leviathan.*

## Spinal Mass Annihilator

If damage from this weapon or any Crippling Effect it would cause would destroy a ship, remove that ship from the game without rolling for Explosion.

***Recorded ships of the class:*** *Bonaventure, Revenge (Independents), Soul Reaver, Executioner (Kalium)*

*The Drake class was the first human vessel to mount an apocalypse-grade, non-nuclear weapon: the Spinal Mass Annihilator. It is an enormous kinetic energy weapon capable of driving a house-sized lump of tungsten carbide coated, ultra-dense metal clean through a battleship, lengthwise. Such a weapon required enlarged power cores aboard the twinned Old Battleships and the new central core to feed it, necessitating the loss of its broadsides. Secondary armaments include NC-16 missile turrets and a pair of heavy vent canons to burst surplus energy onto any survivors.*

## Engine Refit

This Ship may take an Engine Refit for +45 points, increasing its Thrust by 2".

***Recorded ships of the class:*** *Sunbeam, Ragefire (Independents), Volcanic, Your Fate (Kalium)*

*The Nimitz was the last class to be built via the expedient of twinning Old Battleship hulls, alongside its sister class, the Yamamoto. This method of shipbuilding, although apparently crude, offered more flexibility in its modularity vs the newer, purpose-built Grand Battleships. This made a risky experiment cost-viable: mounting the largest vent canon ever built. The Spinal Vent lance demands a massive hull and all the power it can guzzle. Therefore, the Nimitz's secondary armaments include NC-16 missiles and hangar bays. The Nimitz is a frightening combatant even today, although its captain always runs the risk of broiling the engineering crews tasked with maintaining the weapon*

| Yamamoto | 290 pts |
|---|---|
| Grand Battleship | H / 60mm |

| Thrust | Scan | Sig | Hull | ES | KS | BS | G | Special |

## Engine Refit

This Ship may take an Engine Refit for +45 points, increasing its Thrust by 2".

***Recorded ships of the class:*** *Sol Requiem, Sadness (Independents), Spear of Onyx, Decapitator (Kalium)*

*The Yamamoto class Grand Battleship is a consummate flagship killer. Like its sister class, the Nimitz, it mounts a Spinal Vent Lance. It forgoes the flight decks in favour of enlarged power cores to run its mass driver turrets and mounts a pair of torpedo tubes with capacity for two spreads. One focused volley can cripple a battleship. Due to its flexible, modular construction, like all twin-hulled Grand Battleships, the Yamamoto can be refitted with additional drives to better propel it towards its victim*

## Hardpoints

This Ship must take a total of four options from the Dreadnought Systems list. Up to two options may be taken from the Broadside Hardpoint category. Up to two options may be taken from the Turrets category. Up to two options may be taken from the Launch Hardpoint category. A single option may be taken from the Structures category.

***Recorded ships of the class:*** *Nina, Pinta, Vostok (Independents), Spear of Will, Lightbringer, Searcher (Kalium)*

*Among mankind's oldest FTL-capable ships, Pathfinders offer resistance admirals extreme toughness and flexibility in a battlecruiser-sized package. These mighty vessels once boldly plied new space, often commanding smaller exploration fleets on random jump expeditions. Missions lasting years made bulk essential, since aid or resupply was never assured, given the rarity of FTL-capable ships in those heady days. Once humanity broke from their unequal alliance with the Shaltari, alien raids were a frequent problem.*

*Central to the design brief was reparability in the field and mission-specific configuration. Unlike most ships, whole sections of superstructure can be swapped out for specialist modules, including weapons, storage, hangars, refineries, factories, cores and even vast bio-domes to seed empty planets with Earth's fauna and flora. Since every expedition was unique, no two Pathfinders are identical. Today, these ancient vessels perfectly suit the Resistance and are frequently armed beyond their historic configurations. Like most pre-war designs, Kalium still builds Pathfinders, although why they have built quite so many of these fighting exploration ships vexes the UCM's High Council.*

Up to three options may be taken from the Turrets category. Up to three options may be taken from the Launch Hardpoint category. A single option may be taken from the Structures category.

***Recorded ships of the class:*** *Sao Gabriel, Santa Maria, Gauss (Independents) Seedling, Nostrum, Sulla (Kalium)*

*Explorers are battleship-sized beasts, built from more standard modules than Pathfinders. Larger exploration fleets would typically be headed by one. Although most would morph over their storied lives, each was once famous among Earth's populace. Supremely tough, adaptable and repairable, each is valued by Resistance admirals, who usually max-out the platform's armament.*

*Rarely, they survive in their original configuration - finding the lonely, becalmed Edensphere was a revelation to the UCM - a self-sustaining Amazon ecosystem, she is a final testament to Earth's lost biodiversity. Most Explorers are brutal chop-shop jobs of multiple ships with working modules swapped in for expediency. In their first day's fighting during the Battle for Earth, the Vega Scrapfleet famously jumped the crippled Santa Maria back to their staging area and had her back in action within 48 hours, looking quite different.*

*The grandest of these dinosaurs are known as Colonisers - among the largest ships ever built by mankind, they exceed modern dreadnoughts in displacement. Once they carried whole populations toward their new lives, now they end them en-mass.*

| Coloniser | 255 pts |
|---|---|
| Interstellar Dreadnought | C / 60mm |

| Thrust | Scan | Sig | Hull | ES | KS | BS | G | Special |
|---|---|---|---|---|---|---|---|---|
| 5" | 10" | 16" | 26 | 4+ | 4+ | 5+ | 1 | Command Ship-2 |

| Name | Arc | Att | Lock | DMG | Type | Special |
|---|---|---|---|---|---|---|
| NC-16 Missiles | F/S/R | 4 | 3+ | 1 | K | Close Action |

## Hardpoints

This Ship must take a total of eight options from the Dreadnought Systems list. Up to four options may be taken from the Broadside Hardpoint category. Up to four options may be taken from the Turrets category. Up to four options may be taken from the Launch Hardpoint category. Up to two options may be taken from the Structures category.

***Recorded ships of the class:*** *Esperance, Trinidad, (Independents), Conquistador, Kabal's Heart (Kalium)*

*A noteworthy Coloniser was the Supernova - colloquially known as the "HMS S**tstorm".*

*During the battle of Vega-4 this derelict colonyship was lashed with as many Heavy Vent Cannons as the hull could support and crewed by a skeleton crew of heroes who knew they were not coming back. The Supernova then drifted into the mass of the enemy fleet and unleashed superheated plasma until there was almost nothing left of either fleet.*
